Probability and Genetics

• Understanding Main Ideas

Complete the two Punnett squares below, and then answer the questions on a separate sheet of paper.

1. Punnett Square A:

	B	b
B	BB	Bb
b	Bb	bb

2. Punnett Square B:

	B	b
b	Bb	bb
b	Bb	bb

- In the cross between two black guinea pigs shown in Punnett Square A, what is the probability that an offspring will be black? White? 75% Black
25% White
- Is it possible that the cross between two black guinea pigs in Punnett Square A would not produce a white guinea pig? Explain. Yes, there is a 75% chance that the offspring will be black.
- What color are the guinea pig parents in the cross shown in Punnett Square B?
- Which guinea pig parental in Punnett Square B is homozygous? Which is heterozygous? Explain how you know. bb is black and bb is white
bb is homozygous because they are both the same alleles and
Bb is heterozygous because there are two different alleles
- Calculate the probability that an offspring will be black in the cross in Punnett Square B. What is the probability that an offspring will be white? 50% chance that the offspring will be black and 50% chance the offspring will be white.

• Building Vocabulary

Match each term with its definition by writing the letter of the correct definition on the line beside the term.

- _____ 8. heterozygous
- _____ 9. Punnett square
- _____ 10. genotype
- _____ 11. codominance
- _____ 12. probability
- _____ 13. homozygous
- _____ 14. phenotype

- a. a chart that shows all the possible combinations of alleles that can result from a genetic cross
- b. the likelihood that a particular event will occur
- c. an organism that has two identical alleles for a trait
- d. an organism's physical appearance
- e. an organism's genetic makeup, or allele combinations
- f. an organism that has two different alleles for a trait
- g. inheritance patterns in which the alleles are neither dominant nor recessive

Gale,2012-12-06 The rise of the neutral theory of molecular evolution seems to have aroused a renewed interest in mathematical population genetics among biologists who are primarily experimenters rather than theoreticians This has encouraged me to set out the mathematics of the evolutionary process in a manner that I hope will be comprehensible to those with only a basic knowledge of calculus and matrix algebra I must acknowledge from the start my great debt to my students Equipped initially with rather limited mathematics they have pursued the subject with much enthusiasm and success This has enabled me to try a number of different approaches over the years I was particularly grateful to Dr L J Eaves and Professor W E Nance for the opportunity to give a one semester course at the Medical College of Virginia and I would like to thank them their colleagues and their students for the many kindnesses shown to me during my visit I have concentrated almost entirely on stochastic topics since these cause the greatest problems for non mathematicians The latter are particularly concerned with the range of validity of formulae A sense of confidence in applying these formulae is almost certainly best gained by following their derivation I have set out proofs in fair detail since in my experience minor points of algebraic manipulation occasionally cause problems To avoid loss of continuity I have sometimes put material in notes at the end of chapters

Introduction to Evolutionary Genomics Naruya Saitou,2018-10-25 This authoritative textbook reference presents a comprehensive introduction to the field of evolutionary genomics The opening chapters describe the fundamental concepts in molecular biology and genome evolution for readers without any prior background in this area This is followed by a detailed examination of genome evolution in various different groups of organisms The text then concludes with a review of practical methods essential to researchers in the field This updated and revised new edition also features historical perspectives on contributions to evolutionary genomics from related fields such as molecular evolution genetics and numerical taxonomy Topics and features introduces the basics of molecular biology covering protein structure and diversity as well as DNA replication transcription and translation examines the phylogenetic relationships of DNA sequences and the processes of mutation neutral evolution and natural selection presents a brief evolutionary history of life surveying the key features of the genomes of prokaryotes eukaryotes viruses and phages vertebrates and humans reviews the various biological omic databases and discusses the analysis of homologous nucleotide and amino acid sequences provides an overview of the experimental sequencing of genomes and transcriptomes and the construction of phylogenetic trees describes methods for estimating of evolutionary distances and performing studies of population genetics supplies additional supporting material at an associated website Serving as an indispensable textbook for graduate and advanced undergraduate courses on evolutionary genomics this accessible overview will also prove invaluable to researchers from both computer

science and the biological sciences seeking a primer on the field **Heredity**, 1993 Connected Mathematics Prentice Hall (School Division), 2004 Contains a complete sixth grade mathematics curriculum with connections to other subject areas

Russian Mathematical Surveys, 1971 **Biology** Cecie Starr, 1994 This streamlined book distills biology's key concepts and connects them to the lives of students with numerous timely applications including compelling new vignettes at the beginning of each chapter Once again Starr created new remarkably clear illustrations to help explain complex biological concepts As with every new edition she continues to simplify and enliven the writing without sacrificing accuracy The author has done a major revision of each chapter so that there is extensive updating and organizational changes to enhance the text's flow As the following features indicate the major thrust of the new edition is to enhance accessibility and further stimulate student interest

Whitaker's Cumulative Book List, 1973 Biology Starr, Cecie Starr, 1993 This paperback gives instructors the option of purchasing a shorter book covering selected topics Biology A Human Emphasis covers Part I Cells Part II Genetics Part VI Animal Systems Chapter 39 Population Ecology and Chapter 43 Human Impact on the Biosphere This book contains all front matter with a customized table of contents and back matter from Biology Concepts and Applications Also all the ancillaries available for Biology Concepts and Applications are available for this version
