GENETICS PRACTICE 2: NON-MENDELIAN GENETICS

1. In radishes, the gene that controls color exhibits incomplete dominance. Pure-breeding red radishes crossed with pure-breeding white radishes make purple radishes. What are the genotypic and phenotypic ratios when you cross a purple radish with a white radish?

2. Crosses between a yellow rat and a yellow rat always produce yellow rats. Crosses between a white rat and a white rat always produce white rats. But crosses of a white with a yellow produce a cream rat. What are the genotype and phenotype ratios if you cross two creams?

3. In humans, the allele for albinism (lack of pigment) is recessive to the allele for normal skin pigmentation. If two heterozygous parents have children what is the chance that a child will be albino?
