

## Forensic Biology Final Exam Review

### Day 1 - Entomology

- Forensic Entomology has 3 types, urban, stored-product, and medicolegal entomology
- It is used to estimate PMI, post mortem interval, and we always assume minimum PMI to ensure accuracy
- Why bugs?
  - When a body decomposes, like when rigour mortis occurs, there will be an onset of insect infestations
  - Insects can detect decompositions from farther away than humans
  - Insects arrive at a corpse very quickly
  - This is an accurate method
- Insect Development Rates
  - Requires accurate ID of insects
  - Must be correlated with environmental data like the temperature of the body, ground, etc.
  - There must be other info collected like the length of bugs and maggots when collected
  - ADH/ADD are one way of finding PMI with insect collections by looking at the size and stage of an insect when it is collected, and comparing it to found data that will tell us how long the body may have been in this environment, and if it had been moved possibly
  - There is a specific duration for each stage of life cycle at constant temperature
  - This is mainly used for blowfly maggots
- Flies
  - They are mainly found in ears, mouths, and mainly in warm moist areas
  - Hairy Blow fly: very dark blue/green and metallic
  - Screwworm Fly: dark blue with 3 darker stripes and red eyes
  - Shiny bluebottle fly: thorax is grey, and has a shiny abdomen with brown eyes
  - Black blow fly: looks black, or dark green/blue, and if you look behind his head (on his shoulder) there is a spiracle with orange hair on it which is only found in this fly
  - Flesh fly: pupil casings will be left on circus and will produce silk
  - Cheese Skippers: they will come when the body starts to dry out, so its consistency is moist and cheese like, and have maggots who will spring up

Insect Life Cycle

### Day 2 - Entomology Con't

- Beetle Larvae
  - beetle larvae have pro-legs, which fly maggots do not have
  - Scarab beetle larvae: curled up like
  - Carrion beetle larvae: dark and larger with fringes around the body
  - Rove beetle larvae: long with 2 long pro-legs at the end of the body

In this fully revised and updated edition, real life examples come under the scalpel as forensic scientist Jay Siegel follows the course of evidence all the way from the crime scene to the court judgement. In **Forensic Science: A Beginner's Guide**, all major areas are covered including drugs, trace evidence, pathology, entomology, odontology, anthropology, crime scene investigation, and the law.
