

4.2 Niches and Community Interactions

The Niche

Different organisms live in different places. For example, one organism may live on a coral reef and another in the desert. What determines where an organism can live? Each species has a range of conditions under which it can grow and reproduce. These conditions help define where and how an organism lives.

Tolerance Every species has its own range of tolerance. Tolerance is the ability to survive and reproduce under a range of environmental conditions. When an environmental condition is outside of an organism's optimum range, the organism becomes stressed. It uses more energy to maintain homeostasis, and less for growth and reproduction. A species has an upper and lower limit of tolerance for every environmental factor. It cannot survive beyond those limits. A species' tolerance for environmental conditions helps determine its **habitat**. A habitat is the general place where an organism lives.

Defining the Niche Describing a species' habitat is important. But ecologists also study a species' ecological "job"—where and how it "makes a living." An organism's job is part of its **niche** (nitch). A niche describes what an organism does and how it interacts with the environment. A niche includes the way a species obtains **resources** to survive and reproduce. Resources include any necessity of life, such as water, nutrients, light, food, and space.

Key Question What is a niche?
A niche is the range of physical and biological conditions in which a species lives. It includes the way the species obtains what it needs to survive and reproduce.

Competition

Organisms often try to use a limited resource in the same place at the same time as other organisms. This process is called competition. Plant roots compete for water and nutrients in the soil. Animals compete for food, mates, and places to live and raise their young. Competition can occur among members of the same species (intraspecific competition) and between members of different species (interspecific competition).

Key Questions

- What is a niche?
- How does competition shape communities?
- How do predation and herbivory shape communities?
- What are the three primary ways that organisms depend on each other?

BUILD Understanding

Concept Map Use the highlighted vocabulary words to create a concept map that organizes the information in this lesson.

In Your Workbook Go to your workbook for help completing a concept map. Complete the concept map in Lesson 4.2.

Tolerance A single environmental factor, such as sunlight or temperature, can affect population size. Organisms become more rare in zones of physiological stress (medium blue) and are absent from zones of intolerance (light blue).
