Low Impact Development Manual:

Design, 2004 **Low-impact Development**, 2000 **Low-impact development an integrated design approach**, 2017 This thesis investigates sustainable storm water management in an alpine case study in the eastern part of Innsbruck. Firstly, the focus lies on the ecological properties of concepts such as Low Impact Development LID, Water Sensitive Urban Design WSUD, Sustainable Drainage System SuDS, and Blue Green Infrastructure BGI, especially with regard to the site conditions in the study area. Through a literature research, no specific impediments which would hinder a potential implementation could be detected. However, there are still general obstacles that discourage a more intensive utilization. In the practical part, the Urban Biophysical Environments Technologies Simulator UrbanBEATS, a dedicated software for the planning of sustainable storm water management, is used to detect suitable types and locations for the elements of sustainable storm water management in the study area. In a further step, the Storm Water Management Model SWMM of the United States Environmental Protection Agency USEPA is applied in order to assess the hydrological performance in quantitative terms. The performance during five different storm events is recorded and shows a peak runoff reduction up to 42.6% in the total system, a peak flooding reduction up to 20.28%, and a flooding volume reduction up to 17.49%. **Low Impact Development and Sustainable Stormwater Management** Thomas H. Cahill, 2012-07-17 Sustainable Stormwater Management introduces engineers and designers to ideas and methods for managing stormwater in a more ecologically sustainable fashion. It provides detailed information on the design process, engineering details, and calculations, and construction concerns. Concepts are illustrated with real world examples, complete with photographs. This guide integrates the perspectives of landscape architects, planners, and scientists for a multi-disciplinary approach. This is an enlightening reference for professionals working in stormwater management, from engineers and designers to developers and regulators, and a great text for college courses. [Low Impact Development Manual for Michigan](#), 2008 This manual provides communities, agencies, builders, developers, and the public with guidance on how to apply LID to new, existing, and redevelopment sites. The manual provides information on integrating LID from the community level down to the site level. It not only outlines technical details of best management practices but also provides a larger scope of managing stormwater through policy decision, including ordinances, master plans, and watershed plans. *LID* Wilmington (N.C.). City of, 2014 **Low Impact Development**, 2010-07-01 The manual introduces general audiences to designing landscapes for urban stormwater runoff, a primary source of watershed pollution. The goal is to motivate awareness and implementation of LID in a wide cross-section of stakeholders, from property owners to municipal governments that regulate infrastructure development. The manual provides a holistic framework in which a novice homeowner and an experienced developer can each find an equally transformative role to enact. **Newhall Ranch Resource Management and Development Plan and Spineflower Conservation Plan**, 2009 *City of Claremore Low Impact Development Manual* Kyle Clifton, 2018 A professional project
