Chapter 01. Genetics: The Study of Biological Information Synopsis

Chapter 1 is an introduction to the study of modern-day genetics. Genetics is the study of genes: how genes are segments of DNA molecules; how genes are inherited; and how genes direct an organism's characteristics. The most important insight from this chapter is that the basic function of most (but not all) genes is to direct the synthesis of (to **encode**) a particular type of protein.

Problem Solving

The first chapter of this book provides a broad overview of genetics. Chapter 1 covers a lot of ground, but only superficially. Don't worry if at this point you don't understand all of the information given at a deep level – you will later on. However, you are likely familiar already (from introductory biology classes) with some of the fundamentals of what a gene is and how genes are used to make proteins. The problems in this chapter are meant to get you started in the habit of thinking like a geneticist – quantitatively, analytically, carefully, and logically.

Vocabulary

1.

- | | |
|--------------------|---|
| a. complementarity | 4. G-C and A-T base pairing in DNA through hydrogen bonds |
| b. nucleotide | 11. subunit of the DNA macromolecule |
| c. chromosomes | 7. DNA/protein structures that contain genes |
| d. protein | 1. a linear polymer of amino acids that folds into a particular shape |
| e. genome | 9. the entirety of an organism's hereditary information |
| f. gene | 8. DNA information for a single function, such as a protein |
