

- #1. The independent variable in this experiment was the side of the penny.
- #2. The dependent variable in this experiment was the number of drops on a penny.
- #3. Surface tension is what makes water dome on the penny.
OR...
Water domes on the penny because of surface tension.
- #4. This lab was a controlled experiment because we only changed one variable which was the side of the penny. We tried to keep all other variables like water temperature, dropper height etc., the same.
(Other variables could be year/condition of the penny, dirty/clean penny, design on the penny)
- #5. Wallace's answer... Three trials were taken because if I only did the lab once, I could have made a mistake that gave me a wrong answer. More trials would let me compare my data and rule out the mistake.
- #6. My group fit ___ drops on the Heads side of a penny in trial #1. In trial #2 my group fit ___ drops.
(Data Table #1). The results don't match. We had ___ more (less?) drops in trial #1. One reason why the results don't match is drop size. A second reason could be the height the eye dropper was held away from the penny. (other reasons – penny not dry between trials, sponge on a tilt, warm water (not cold), air bubbles, miscounting drops...)
- #7. A. My group average for the heads side of the penny was ___ drops. (Data Table #1). The class average was ___ drops. (Data Table #2). My group had ___ drops less (more?) than the class.
- B. My group average for the tails side of the penny was ___ drops. (Data Table #1). The class average was ___ drops. (Data Table #2). My group had ___ drops less (more?) than the class.
- C. Overall, both my heads results and my tails results were lower than the class by only a little bit (a lot?). (Graph #2).
Or ...
Overall, my heads results were higher (lower?) than the class by a lot (a little?) and my tails results were lower (higher?) than the class by a lot (a little?). (Graph #2).
- D. Overall the ___ side of the penny held more drops for my group. The class however, had more drops on the ___ side of the penny. Our data did not match the class. Overall there was only a ___ drop difference between heads and tails for the class on average. (Data Table #2). I'm surprised! I thought there would be a larger (smaller) difference in the sides. I thought the ___ side had way more detail and would hold a lot more water than the ___ side.
Or ...
Overall the ___ side of the penny held more drops for my group and the class. (Data Table #2). Our data did match the class. I'm surprised! I thought there would be a larger (smaller) difference in the sides. I thought the ___ side had way more detail and would hold a lot more water than the ___ side.
