

# Electricity

Electricity is a form of energy.

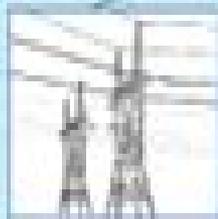

It is the flow of an electric charge through a material, for example through wires from a power source to an appliance.

Two supplies of electricity are mains electricity and batteries.

Mains electricity is supplied to buildings through overhead power lines and pylons or underground cables.

A battery is a device that stores electricity as chemical energy.

# Electricity

Two types of electricity are natural and human-made.

Human-made electricity includes energy produced by power stations, solar panels and wind turbines.

Renewable sources of energy such as coal, gas, wind and solar are converted into electricity. This is sometimes known as green electricity.

Natural electricity is found in the form of lightning and static electricity.

# Electricity

Electricity flows along a pathway called a circuit. It must be a closed loop.

A switch can open or close a circuit.

Electrons are small particles that travel around an electrical circuit.

A current describes the flow of electrons and is measured in amps.

The voltage makes the electric flow through the wires in a loop. The greater the voltage, the more current will flow.

# Electricity

Materials through which electricity can flow are called conductors.

Materials which electricity cannot flow through are called electrical insulators.
