Servamus, 2004 **Handbook on Human Rights to a Healthy Environment** Jean-Claude N. Ashukem, 2026-01-01

This unique handbook provides authoritative and comprehensive analysis of the constitutional human rights to a healthy environment in Cameroon and Africa. It explores Cameroon and African regulatory and policy interventions regarding environmental protection systematically addressing a broad range of sub-topics in a rich discussion of the various dimensions of environmental protection. This handbook is timely relevant and adds to the limited existing literature on constitutional environmental governance in Cameroon and Africa offering fresh and extensive insights into environmental protection in the region and sharing lessons that can be applied to other African countries. This handbook is undoubtedly a valuable resource for scholars of human rights, environmental protection and related fields and a practical guide for a range of actors in environmental governance such as state actors and non-governmental organizations in Cameroon and Africa in general.

The Journal of the Oklahoma State Medical Association, 1982 **The Funnel: From the Skull Base to the Sacrum** Massimiliano

Visocchi, 2023-12-28 Skull base surgery is a minimally invasive endoscopic procedure which involves the surgeon inserting instruments through the natural openings in the skull, the nose or mouth or by making a small hole just above the eyebrow. This type of surgery requires a team of specialists which may include ENT, ear, nose and throat, maxillofacial and neurosurgeons as well as radiologists. The craniovertebral junction (CVJ) has a unique anatomical bone and neurovascular structure which not only separates the subaxial cervical spine but also provides a special cranial flexion, extension and axial rotation pattern. As such, a sound knowledge of the basic principles of spine instrumentation and the region's kinematics are essential when it comes to strategic preoperative planning. Skull base, craniovertebral junction, spine, demolitive and reconstructive surgery, neuromodulation, bioengineering and transplantation are recent tools used to improve reconstruction, restoration and rehabilitation. Three key words central to the core aim of the Neurorehabilitation and Reconstruction Committee of the WFNS which is to promote mechanical, morphological and functional restoration.
