

step 2 Gather DNA.

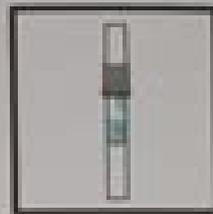

1. Chill out. Allow vials of blue gel to sit for 30 minutes before giving your saliva sample.

Fill the tube with saliva to the black wavy line.
Hold the tube until your saliva has reached halfway to the top. Blow away the cap the way you'd blow away a fly. It's easy! Just don't let it happen back again.

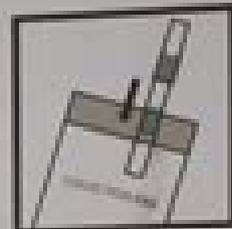

Replace the funnel with the cap.
Remove the funnel from the tube. Screw on the enclosed Cap **tightly to release the solution** that will stabilize the DNA in your saliva.

Tighten to release stabilizing fluid.
You will know it works when the blue solution from the Cap has emptied into the tube.

Shake the tube for at least five seconds.
This will ensure your sample mixes thoroughly with the stabilizing solution, which will preserve your DNA sample.

Place the tube in the collection bag.
Place the sample inside the collection bag provided in your kit. Seal the bag with the adhesive strip.

Mail in your sample.
Place your sample in the prepaid mailing box. Seal the box with the adhesive strip and mail it in.

Always use the correct shipping address for your kit. If your kit does not include a return label, please contact us at www.ancestryDNA.com for more information.
