János D. Pintér, 2006-10-13 Optimization models based on a nonlinear systems description often possess multiple local optima

The objective of global optimization GO is to find the best possible solution of multiextremal problems This volume illustrates the applicability of GO modeling techniques and solution strategies to real world problems The contributed chapters cover a broad range of applications from agroecosystem management assembly line design bioinformatics biophysics black box systems optimization cellular mobile network design chemical process optimization chemical product design composite structure design computational modeling of atomic and molecular structures controller design for induction motors electrical engineering design feeding strategies in animal husbandry the inverse position problem in kinematics laser design learning in neural nets mechanical engineering design numerical solution of equations radiotherapy planning robot design and satellite data analysis The solution strategies discussed encompass a range of practically viable methods including both theoretically rigorous and heuristic approaches

*Country Guide and Nor'west Farmer*, 1915 Computational Physics Philipp O.J. Scherer, 2017-09-07 This textbook presents basic numerical methods and applies them to a large variety of physical models in multiple computer experiments Classical algorithms and more recent methods are explained Partial differential equations are treated generally comparing important methods and equations of motion are solved by a large number of simple as well as more sophisticated methods Several modern algorithms for quantum wavepacket motion are compared The first part of the book discusses the basic numerical methods while the second part simulates classical and quantum systems Simple but non trivial examples from a broad range of physical topics offer readers insights into the numerical treatment but also the simulated problems Rotational motion is studied in detail as are simple quantum systems A two level system in an external field demonstrates elementary principles from quantum optics and simulation of a quantum bit Principles of molecular dynamics are shown Modern boundary element methods are presented in addition to standard methods and waves and diffusion processes are simulated comparing the stability and efficiency of different methods A large number of computer experiments is provided which can be tried out even by readers with no programming skills Exercises in the applets complete the pedagogical treatment in the book In the third edition Monte Carlo methods and random number generation have been updated taking recent developments into account Krylov space methods for eigenvalue problems are discussed in much more detail Short time Fourier transformation and wavelet transformation have been included as tools for time frequency analysis Lastly elementary quantum many body problems demonstrate the application of variational and Monte Carlo methods
