Metadone - Correct Answer the only long-acting full opioid agonist approved for treatment, at this time. It provides a range of effects similar to those of short-acting opiates like Heroin and Morphine, suppressing withdrawal symptoms and avoiding cravings as the opioid is eliminated from the body. Dose needed for cross-tolerance depends on client's level of tolerance for the drug(s).

Trauma-informed treatments - Correct Answer This treatment approach should minimize the risk of re-traumatization or replicating prior trauma dynamics. Ex: Clients may express feelings of powerlessness or being trapped if they are not active involved in treatment decisions or if providers mirror specific behaviors/dynamics from client's past traumatic experiences.

Screening - Correct Answer The first two steps in in this process are to determine whether the client as a history of trauma and whether he/she has trauma related symptoms.

Screening - Correct Answer Often the first contact between client and treatment providers, this interaction can set the tone of treatment and being the relationship with the client.

Assessment - Correct Answer When a client screens positive for substance abuse, trauma-related symptoms, or mental health disorders, the counselor should follow up with a comprehensive _____

Assessment - Correct Answer This process should reoccur throughout treatment, to provide valuable information and details as client's trust in staff members grow and progress occurs.

CBT - Correct Answer Most PTSD and SA models involve _____ that integrates cognitive and behavioral theories by incorporation two ideas: that thoughts mediate between situational demands and one's attempts to effectively respond and that behavioral change influences acceptance of altered cognition about oneself or a situation and establishment of newly learned patterns

Integrated Life-Cycle and Risk Assessment for Industrial Processes and Products Guido Sonnemann, Michael Tsang, Marta Schuhmacher, 2018-10-10 Life cycle assessment is a methodology used to evaluate the environmental impacts of a product process or service during its life cycle and risk assessment is a tool to evaluate potential hazards to human health and the environment introduced by pollutant emissions The United Nations Sustainable Development Goals call for among other objectives responsible consumption and production by decoupling environmental resource use and environmental impacts from economic growth and human well being Life cycle assessment and risk assessment are both analytical system approaches that allow scientists and other decision makers to address these issues and objectives according to the current understanding of environmental mechanisms This book is the first attempt to illustrate the existing interfaces between life cycle assessment and risk assessment and to indicate options for further integration of both tools The second edition Focuses on sustainability Considers new developments in life cycle assessment and environmental risk assessment over the last ten years at the international level Introduces broader concepts and discussions on integrative versus the complementary use of life cycle and risk assessments Extends the scope of integrated life cycle and risk assessments to critical raw materials Includes more case studies and discusses engineered nanomaterials Featuring contributions from leading experts Integrated Life Cycle and Risk Assessment for Industrial Processes and Products is a great reference for graduate students and professionals in environmental management and intends to catalyze communication between life cycle assessment and risk assessment experts and scientists in academia industry and governmental agencies The practical format of the book illustrated with flowcharts examples exercises and concrete applications makes it a useful manual for analyzing situations and making decisions

Tools and Methods for Pollution Prevention Subhas K. Sikdar, Urmila Diwekar, 1999-08-31 Tools are needed to define measure and assess pollution in processes and products to direct and measure improvements in designing cleaner processes and products and to design benign processes and products Life cycle assessment process simulation and integration material substitution and environmental impact assessment are some of these tools Advances have been made recently in incorporating environmental criteria in process and product design some renditions of which are commercially available This is the first compilation of methods tools and models that can be used to design products and manufacturing processes that prevent pollution from occurring in the first place rather than treating the wastes after they are formed There is also a critique of social barriers to pollution prevention Readership Scientists and advisors in academia government and industry engaged in encouraging enforcing developing and or implementing cleaner processes and products

A Guide to the Implementation of the ISO 14000 Series on Environmental Management Ingrid Ritchie, William Hayes (C.I.H.), 1998 An resource for professionals responsible for environmental health and safety for ensuring conformance with international regulations and standards or for evaluating the costs and benefits of ISO 14000 compliance Covers risks subject to ISO
