Lecture 2: Global Health

What is the definition of global health, and why is the study of global health important?

- Global health is the state of complete physical, mental, and social well-being of individuals worldwide, and it recognizes the interconnection and interdependence of health issues and healthcare systems across national borders. The study of global health is crucial for several reasons:
- Rapid spread of diseases across borders affects economies and societies.
- It addresses ethical considerations, such as providing access to vaccines and healthcare for disadvantaged populations.
- Data collection and surveillance are essential for understanding and responding to outbreaks that can impact the world.

Can you discuss two success stories in disease eradication?

- **Eradication of Smallpox:** Smallpox, caused by the **variola virus**, is a highly contagious disease. The methods used for its eradication included **mass vaccination**, especially through a strategy called **ring vaccination**, which identified and vaccinated contacts of infected individuals. **Symptoms** included high fever, rash, and scabs, with a 30% mortality rate without vaccination. Smallpox was successfully eradicated in 1982, marking a significant achievement in global health.
- **Eradication of Polio:** Polio is another infectious disease that has been targeted for eradication. The approach involves widespread vaccination campaigns and surveillance to identify and immunize people in areas with active polio transmission. Progress has been made, with polio nearly eradicated from most parts of the world.

Describe the eradication of smallpox, including the methods used for eradication, information about the virus, its symptoms, and the course of the disease.

- Smallpox eradication was a significant achievement in global health. The virus, **Variola**, was highly contagious and had two forms: **Variola major** and **Variola minor**. **Eradication methods** included **mass vaccination**, **ring vaccination**, and **intensive surveillance**. Smallpox symptoms included high fever, a distinctive rash, scabs, and itching.
- The disease followed a typical course, with an **incubation period**, **initial symptoms**, **rash development**, **pustule formation**, and **eventual scabbing**. Variola major had a mortality rate of around 30%. Successful eradication in 1982 was due to mass vaccination campaigns, effective surveillance, and ring vaccination to break the transmission chain, showcasing the power of global cooperation and vaccination in disease control.
