QUESTIONS AND ANSWERS

Case Study 3: Technological product with a negative impact — Cell Phones

The cell phone industry continues to grow. The invention of the cell phone improved communication. At the press of a button, people can communicate with others all over the world.

This increased ability to communicate is seen as progress, but it also brings some negative effects.

It has been suggested that **prolonged and constant use of cell phones can cause health problems.**

Another problem is **anti-social behaviour.** Many people spend a lot of time texting or talking on the phone during important family time. The same happens in public places, where people ignore others around them.

Even at social events and meetings, people are often busy playing games or sending messages instead of interacting with others face to face.

Talking on a cell phone while driving is dangerous and causes accidents, injuries, and even deaths.

There is also a major problem with **waste disposal.** People throw away millions of cell phones every year, even if the phones still work. In South Africa, more than **10 million old cell phones** are thrown away each year. These phones end up in landfill sites. The chemicals from the phone batteries leak out, **poison the soil, and pollute the underground water.**
