Most servers today have the power to handle many more users. So, if you can manage to recover a larger database within your allotted recovery window, then you can save costs by consolidating Exchange users onto fewer machines. RMSE for Exchange product is one way to use SnapView to help lower costs for your business.

RMSE integration makes it easy to create disk-based replicas (Clones) of Exchange databases during normal business hours and run backup at your leisure. Server cycles are restored to Exchange servers, allowing faster responses for Exchange users.

Restoring Exchange mailboxes from a disk-based replica using SnapView is much faster than utilizing tape to restore.

EMC's RMSE solution provides a simplified way to actually scan the Exchange server's system log to check for Exchange database corruption, and it also runs an Exchange-supplied corruption utility to ensure there are no "torn pages" on the Clone that would make the database unrecoverable or corrupt. This ensures that the database is valid prior to backup or restore. Other vendors consider this as an option, but this is mandatory for EMC's method.
