

Procedure

1. Open Unisphere and select **Service**, then **Service Tasks**.
2. Under the name of the storage processor where you installed the new I/O module, embedded module, or 4-port card, select **Reboot** and click **Execute**.
3. When prompted, type the Service Password to put the SP assembly into Normal Mode.

It may take up to 15 minutes for the system to complete its reboot to return to normal mode.

Verifying the operation of the new part in Unisphere

Verify that the new part is recognized by your system, and operating correctly.

Procedure

1. In Unisphere, select **System View**.
2. On the **Summary** page, confirm that the system status is OK.
3. Select the **Enclosures** page.
4. Verify that the part appears with the OK status in the enclosure view. You may need to refresh Unisphere by clicking on the refresh icon next to the **Enclosures** view.

If the system health monitor shows the part as faulted, contact your service provider.

Add a 4-port card

Take the following actions to install a new 4-port card into the system.

Preparing the SP assembly for service

Reset and hold is a special state during which power is maintained to the SP assembly so that I/O modules, embedded modules, and 4-port cards can be safely removed. This state has fewer management capabilities than Service Mode, but allows for easier I/O module, embedded module and 4-port card replacement.

Note

Both SP assemblies must NOT be in reset and hold simultaneously. The system should be up for at least 40 minutes since its last reboot before being placed into reset and hold.

Procedure

1. Open Unisphere and select **Service**, then **Service Tasks**.
2. Under the name of the SP assembly where you will install the new I/O module, embedded module or 4-port card, select **Reset and Hold** and then click **Execute**.
3. When prompted, type the service password to put the SP assembly into reset and hold.
4. (Optional) Either refresh the browser or follow the onscreen instructions to restore full-functionality to Unisphere.
