

Holt Physics—Chapter 5: Work and Energy

Price

I. Section 5.1—Work

A. Definition of *work*

1. Work does not mean the same thing in Physics as it does in the everyday sense of the word.
2. **Work is defined as a force causing a displacement.**

Work = force x displacement

$$W = Fd$$

3. Work is NOT done on an object unless the displacement is greater than zero
4. The only forces that are considered to do work are those that are *parallel* to the displacement.
5. For this reason we use our trigonometric functions to calculate forces applied at an angle.

6. Note that θ is the angle between the applied force and the displacement.
7. Work is described in Newtons x meters (force x displacement). The unit of work is the Joule (J)
8. 1 Newton meter = 1 Joule
9. Work is a vector with both direction AND magnitude. This means **WORK CAN BE NEGATIVE!**
10. Negative work is most commonly used to slow an object down or decrease its velocity.

II. Section 5-2: Energy

A. Kinetic Energy
