storage Building reusable templates to separate your presentation from your logic How to design build and test web APIs for your Swift apps Authenticating users to create login screens You'll also learn some HTML JavaScript and SQL along the way as part of the Swift projects Server Side Swift follows the same approach I used with Hacking with Swift small standalone projects that teach individual techniques starting from scratch so you end up with a huge library of finished projects you can develop further or use as the base for something entirely new Which framework is used Now for the answer to a question you've probably been asking the book uses IBM's Kitura framework for server side Swift That's not an accident Apple introduced Kitura at WWDC 2016 It's rare to see third parties speak at WWDC but IBM and Apple formed a close partnership to help drive Swift adoption forward and Kitura is part of that IBM is putting huge resources behind the platform and probably has the highest concentration of Swift developers outside of Cupertino Kitura outperforms Vapor in benchmarks including having significantly lower memory usage and latency Most importantly Kitura is very similar to Express.js which is a massively popular development framework for JavaScript This lets existing web developers migrate to Swift more easily Even if Kitura isn't your preferred choice the Swift Server APIs work group are looking at ways to build shared APIs for standard server functionality so hopefully you'll learn lots of transferrable skills
