

Lab practical 2 study guide

Review the different media and biochemical tests we have done. For each you should know:

- Know the positive and negative results and any selective/differential properties.
 - what component(s) makes it selective? Differential? What is it selective for/against? Is there a pH indicator? How is this media used (what do you learn from these tests results)? Etc.

For GPC labs (Staph and Strep)

- Know all the species characteristics we discussed in the lab and in the lab manual.
- Understand the differentiating tests used for both the Staph and Strep labs.
- Know which species give which results (the identification process used to differentiate species)
- Be able to identify each species using the tests/media we learned about.

For GNR lab

- Know all of the species we discussed in lab along with their family names. Know the key characteristics discussed in the lab for each. Know the Enterobacteriaceae family characteristics.
- You will not need to spell these names, but you should know family, genus and species and any key characteristics we highlighted in lab for all the species we discussed.
- Know the media and biochemical tests used for this lab. Know how they work, what their key components are, what positive/negative results look like and what it is telling us about the microbe being tested.
- You do not need to know which species give positive/negative results for GNR. Be able to interpret all the different tests and use them to identify a species if given a chart similar to what we used in lab.

For Aerotolerance lab

- Understand how FTG works (including the chemical components discussed for FTG), how this media provides or restricts oxygen to create an oxygen gradient. Know what the different growth results look like.
- Know the incubation conditions we used and how to interpret results. Know how anaerobic chambers and candle jars impact oxygen levels (and how this is accomplished).
- Know the % oxygen for each of the conditions discussed and what type of microorganism will grow in each (Anaerobic chamber, candle jar, air)
- Know the species we used tested in that lab and their oxygen growth requirements.
- Know the diseases caused by all of the Clostridium species discussed in that lab.

The lab practical is "semi-cumulative."

- The lab will consist of 25-30% of material from the first half of class and 75-70% from the 2nd half of class.
- Overlapping information (like such as Gram stain, SBA, SFI etc...) is fair game for either category.

What you should know from the 1st lab practical

- Anything on the first lab practical is fair game for the cumulative practical. You should review all of that information as well. You will not need to spell species from LP1.
- Go over the study guide from the 1st lab practical to see what was covered during the first half of this course.
