

Lab 13: Reproductive System Anatomy Lab

Learning outcomes of the lab exercises:

1. To identify and structures of the male and female reproductive systems on an appropriate model, and to describe the functions of each.
2. To trace the pathway followed by a sperm from its site of formation to its destination.
3. To trace the pathway followed by an egg from its site of formation to its destination.
4. To identify and general microstructures of the male and female systems.

People often use the words "female" and "male" to describe two different concepts: our sense of gender identity, and our biological sex as determined by our X/Y chromosomes, hormones, sex organs, and other physical characteristics. For some people, gender identity is different from biological sex or their sex assigned at birth. In this chapter and the next chapter, "female" and "male" refer to sex only, and the typical reproductive anatomy of XX and XY individuals is discussed. *OpenStax A&P 2e, Chapter 27.1*
