Laboratory Activity 1 General Chemistry Lab Equipment Identification and Description

Objectives: At the end of this activity, you must be able to:

- Identify the different laboratory equipment and tools used in Chemistry course;
- Cite the importance of exhibiting proper techniques in handling the tools; and
- Relate the importance of familiarizing oneself in the proper use of lab tools to the future profession.

Introduction:

According to American Society of Chemistry (ASC), organic chemistry is the study of carbon-containing molecules' structure, characteristics, content, reactions, and production. The majority of organic molecules include carbon and hydrogen, but they may also contain a variety of additional elements (e.g., nitrogen, oxygen, halogens, phosphorus, silicon, sulfur). It was originally restricted to the study of molecules created by living organisms, but it has now expanded to encompass man-made substances (e.g., plastics). These man-made substances can never be created without the tools and proper knowledge in handling them. As a student studying this course, it is of paramount importance that you familiarize yourself with these tools, not only to successfully pass this course but also to properly use them and take good care of them especially when you are already in the field.
