*Think* Guy P. Harrison, 2013-11-05 Think more critically learn to question everything and don't let your own brain trip you up This fresh and exciting approach to science skepticism and critical thinking will enlighten and inspire readers of all ages With a mix of wit and wisdom it challenges everyone to think like a scientist embrace the skeptical life and improve their critical thinking skills *Think* shows you how to better navigate through the maze of biases and traps that are standard features of every human brain These innate pitfalls threaten to trick us into seeing hearing thinking remembering and believing things that are not real or true Guy Harrison's straightforward text will help you trim away the nonsense deflect bad ideas and keep both feet firmly planted in reality With an upbeat and friendly tone Harrison shows how it's in everyone's best interest to question everything He brands skepticism as a constructive and optimistic attitude a way of life that anyone can embrace An antidote to nonsense and delusion this accessible guide to critical thinking is the perfect book for anyone seeking a jolt of inspiration

**50 Popular Beliefs That People Think Are True** Guy P. Harrison, 2012-01-03 What would it take to create a world in which fantasy is not confused for fact and public policy is based on objective reality asks Neil deGrasse Tyson science popularizer and author of *Astrophysics for People in a Hurry* I don't know for sure But a good place to start would be for everyone on earth to read this book Maybe you know someone who swears by the reliability of psychics or who is in regular contact with angels Or perhaps you're trying to find a nice way of dissuading someone from wasting money on a homeopathy cure Or you met someone at a party who insisted the Holocaust never happened or that no one ever walked on the moon How do you find a gently persuasive way of steering people away from unfounded beliefs bogus cures conspiracy theories and the like This down to earth entertaining exploration of commonly held extraordinary claims will help you set the record straight The author a veteran journalist has not only surveyed a vast body of literature but has also interviewed leading scientists explored the most haunted house in America frolicked in the inviting waters of the Bermuda Triangle and even talked to a contrite Roswell alien He is not out simply to debunk unfounded beliefs Wherever possible he presents alternative scientific explanations which in most cases are even more fascinating than the wildest speculation For example stories about UFOs and alien abductions lack good evidence but science gives us plenty of reasons to keep exploring outer space for evidence that life exists elsewhere in the vast universe The proof for Bigfoot or the Loch Ness Monster may be nonexistent but scientists are regularly discovering new species some of which are truly stranger than fiction Stressing the excitement of scientific discovery and the legitimate mysteries and wonder inherent in reality this book invites readers to share the joys of rational thinking and the skeptical approach to evaluating our extraordinary world *Unapologetic* John W. Loftus, 2016-11-01 A forceful takedown of faith based reasoning in secular institutions Just as intelligent design is not a legitimate branch of biology in public educational institutions nor should the philosophy of religion be a legitimate branch of philosophy argues acclaimed author John W Loftus In his call for ending the philosophy of religion he argues that as it is

presently being practiced the main reason the discipline exists is to serve the faith claims of Christianity Most of philosophy of religion has become little more than an effort to defend and rationalize preexisting Christian beliefs By highlighting the stark differences between faith based reasoning and evidence based reasoning Loftus presents vital arguments and lessons about the importance of critical thinking not only in all aspects of study but also in life His conclusions and recommendations thus resonate far beyond the ivory towers and ivy covered walls of academic institutions For atheists secular individuals and those interested in critical thinking about religion

**Race and Reality** Guy P. Harrison,2010-05 There are vast differences between notions of race and the scientific view of human diversity Drawing on research from diverse sources and interviews with key scientists an award winning journalist surveys the current state of a volatile subject

*Life Driven Purpose* Dan Barker,2015-04-01 Every thinking person wants to lead a life of meaning and purpose For thousands of years holy books have told us that such a life is available only through obedience and submission to some higher power Today the faithful keep popular devotionals and tracts within easy reach on bedside tables and mobile devices all communicating this common message Life is meaningless without God In this volume former pastor Dan Barker eloquently powerfully and rationally upends this long held belief Offering words of enrichment emancipation and inspiration he reminds us how millions of atheists lead happy loving moral and purpose filled lives Practicing what he preaches he also demonstrates through his own personal journey that life is valuable for its own sake that meaning and purpose come not from above but from within

*Good Thinking* Guy P. Harrison,2015-10-06 Critical thinking skills are essential for life in the 21st century In this follow up to his introductory guide Think and continuing his trademark of hopeful skepticism Guy Harrison demonstrates in a detailed fashion how to sort through bad ideas unfounded claims and bogus information to drill down to the most salient facts By explaining how the human brain works and outing its most irrational processes this book provides the thinking tools that will help you make better decisions ask the right questions at the right time know what to look for when evaluating information and understand how your own brain subconsciously clouds your judgment Think you re too smart to be easily misled Harrison summarizes scientific research showing how easily even intelligent and well educated people can be fooled We all suffer from cognitive biases embellished memories and the tendency to kowtow to authority figures or be duped by dubious truths packaged in appealing stories And as primates we are naturally status seekers so we are prone to irrational beliefs that seem to enhance our sense of belonging and ranking Emotional impulses and stress also all too often lead us into traps of misperception and bad judgment Understanding what science has discovered about the brain makes you better equipped to cope with its built in pitfalls Good Thinking the book and the practice makes clear that with knowledge and the right thinking skills anyone can lead a safer wiser more efficient and productive life

Harrison,2009-09-18 Many books that challenge religious belief from a skeptical point of view take a combative tone that is almost guaranteed to alienate believers or they present complex philosophical or scientific arguments that fail to reach the average reader This is undoubtably an ineffective way of encouraging people to develop critical thinking about religion This unique approach to skepticism presents fifty commonly heard reasons people often give for believing in a God and then raises legitimate questions regarding these reasons showing in each case that there is much room for doubt Whether you re a believer a complete skeptic or somewhere in between you ll find this review of traditional and more recent arguments for the existence of God refreshing approachable and enlightening From religion as the foundation of morality to the authority of sacred books the compelling religious testimony of influential people near death experiences arguments from Intelligent Design and much more Harrison respectfully describes each rationale for belief and then politely shows the deficiencies that any good skeptic would point out As a journalist who has traveled widely and interviewed many highly accomplished people quite a number of whom are believers the author appreciates the variety of belief and the ways in which people seek to make religion compatible with scientific thought Nonetheless he shows that despite the prevalence of belief in God or religious belief in intelligent people in the end there are no unassailable reasons for believing in a God For skeptics looking for appealing ways to approach their believing friends or believers who are not afraid to consider a skeptical challenge this book makes for very stimulating reading      **Free Inquiry** ,2008      *The Publishers Weekly* ,1893      **Catalog of Copyright Entries.
