

Tips for Beginners

[Quick Start](#)

[Code Editing](#)

[Debugging](#)

[FAQ](#)

In this 1-minute tutorial, we'll show you how to create a quick-start Java program in VS Code.

Setup the Workspace

VS Code Java works directly with **folders** that have source code. To setup the workspace, simply open a folder using [File > Open Folder...](#)

Create a Class

A program needs an entry and a Java program needs a class to host its entry. To create a class for our quick-start program, [Create a File](#) and set its name to `QuickStart.java`.

Now you can put the code in the new file:

```
class QuickStart {
    public static void main(String[] args) {
        System.out.println("Hello, World.");
    }
}
```

Run the program

To run the program, press `F5`. By default, the program is launched in the [Integrated Terminal](#). You should already see the output there.

How to Debug?

When you press `F5`, you are already debugging. Try setting some breakpoint by clicking on the line numbers
