

Relay Installation

Install the Intoxalock Legacy Relay under the dash, out of sight where it is somewhat accessible to the user. DO NOT make connections to the fuse panel due to poor performance experienced.

- Step 1:** Test the vehicle's horn, battery, and starter circuit. Old or weak batteries, as well as starters which draw excessive current, should be replaced to assure reliable performance of the Intoxalock. The customer is responsible for the cost of these repairs.
- Step 2:** Using a Posi-Tap Connector, connect the **GREEN** Run Wire from the side of the relay to a 12-volt source that is "HOT" only when the ignition key is in the "ON" position and the vehicle is running. *This is normally referred to as the ignition wire.*

QUICK TIP: Do Not Use the Start Wire

Green Run Wire

When installed properly, the Intoxalock will recognize the car is started and the 1, 2, or 3-minute countdown will turn off approximately 5 seconds after the key is turned on and the vehicle has been started. Please confirm this is functioning properly before releasing the vehicle to the customer.

Advise customers if the key is inserted into the ignition and turned to the "ON" position, the Intoxalock will record the action as an "UNAUTHORIZED ATTEMPT TO START" and prevent the client from starting the vehicle.

- Step 3:** Cut the Starter Wire. Connect the **BROWN** and **WHITE** wires from the relay to the cut ends of the starter wire. The brown wire connects to the key side and the white wire to the starter side.
- Step 4:** Using the attached screw, connect the **BLACK** wire to the vehicle frame on a non-painted surface.
- Step 5:** Using a Posi-Tap Connector, connect the **RED** wire to a constant 12V power source.
