

GPG Installation Guide for Windows.

To install GPG on your computer, first go to the GPG web site <http://www.gnupg.org/en/download/index.html> and download the Windows package. Look for the links that says, "GPG [some version number] compiled for Microsoft Windows."

You will need a program that reads Zip files to unpack the compressed file. Unzip the contents of the compressed file into a new folder called *gnupg* under your C: drive (*c:\gnupg is the default location*).

Next, edit your *PATH* environment variable so that Windows knows where to find the program. In Windows NT/2000/XP, you will find this under the Control Panel --> System Properties --> the Advanced tab --> Environment Variables --> System variables.

In Windows 95/98/ME, you will find it in the *c:\autoexec.bat* file. Values in this variable are separated by semicolons, so add ";c:\gnupg" to the end of the variable. For example, if your *PATH* variable reads as

```
c:\windows;c:\utils
```

then change it to

```
c:\windows;c:\utils;c:\gnupg
```

Now, if you're using Windows 95/98/ME, restart your computer; if you are using Windows NT/2000/XP, simply start a fresh command prompt, and close any command prompt windows you had open. Now you should be all set to go. Now try it out. At the command prompt, type

```
gpg --version
```

and you should see something like the following output:

```
gpg (GnuPG) 1.4.0
