Excerpt from *Testing Milk and Its Products A Manual for Dairy Students Creamery and Cheese Factory Factory Operators and Dairy Farmers* The need of a rapid accurate and inexpensive method of determining the amount of butter fat in milk and other dairy products became more and more apparent in this country and abroad with the progress of the dairy industry and especially with the growth of the factory system of butter and cheese making during the last few decades SO long as each farmer made his own butter and sold it to private customers or at the village grocery it was not a matter of much importance to others whether the milk produced by his cows was rich or poor But as creameries and cheese factories multiplied and

farmers in the dairy sections of our country became to a large extent patrons of one or the other of these a system of equitable payment for the milk or cream delivered became a vital question About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
