Multimodal Teaching and Learning Gunther Kress,Carey Jewitt,Jon Ogborn,Tsatsarelis Charalampos,2001-10-04 Multimodal Teaching and Learning The Rhetorics of the Science Classroom achieves the rare goal of explicating multimodality as both theory and practice This is an importantly concrete analysis derived from extended careful and interdisciplinary observation which challenges our thinking about how meaning and knowledge are shaped by our modes of communication The book appeals to a wide range of scholars and practitioners far beyond the science classroom Professor Ron Scollon Department of Linguistics Georgetown University This book takes a radically different look at communication and in doing so presents a series of challenges to accepted views on language on communication on teaching and above all on learning Drawing on extensive research in science classrooms it presents a view of communication in which language is not necessarily communication image gesture speech writing models spatial and bodily codes The action of students in learning is radically rethought all participants in communication are seen as active transformers of the meaning resources around them and this approach opens a new window on the processes of learning *Navigating Problem-based Learning* Samy Azer,2008 This complete guide to problem based learning PBL in medicine and health professions explains the aims and essential elements of PBL and provides keys for successfully working in small groups **Biological Perspectives** ,2002-07-31 **Advances in Intelligent Tutoring Systems** Roger Nkambou,Riichiro Mizoguchi,Jacqueline Bourdeau,2010-09-21 May the Forcing Functions be with You The Stimulating World of AIED and ITS

Research It is my pleasure to write the foreword for *Advances in Intelligent Tutoring Systems*. This collection with contributions from leading researchers in the field of artificial intelligence in education AIED constitutes an overview of the many challenging research problems that must be solved in order to build a truly intelligent tutoring system ITS. The book not only describes some of the approaches and techniques that have been explored to meet these challenges but also some of the systems that have actually been built and deployed in this effort. As discussed in the Introduction Chapter 1 the terms AIED and ITS are often used interchangeably and there is a large overlap in the researchers devoted to exploring this common field. In this foreword I will use the term AIED to refer to the search area and the term ITS to refer to the particular kind of system that AIED researchers build. It has often been said that AIED is AI complete in that to produce a tutoring system as sophisticated and effective as a human tutor requires solving the entire gamut of artificial intelligence research AI problems.

Understanding and Developing Science Teachers' Pedagogical Content Knowledge John Loughran, Amanda Berry, Pamela Mulhall, 2012-07-31 There has been a growing interest in the notion of a scholarship of teaching. Such scholarship is displayed through a teacher's grasp of and response to the relationships between knowledge of content teaching and learning in ways that attest to practice as being complex and interwoven. Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge for many teachers is tacit. Pedagogical Content Knowledge (PCK) offers one way of capturing, articulating, and portraying an aspect of the scholarship of teaching and in this case the scholarship of science teaching. The research underpinning the approach developed by Loughran, Berry, and Mulhall offers access to the development of the professional knowledge of science teaching in a form that offers new ways of sharing and disseminating this knowledge. Through this Resource Folio approach comprising CoRe and PaP eRs, a recognition of the value of the specialist knowledge and skills of science teaching is not only highlighted but also enhanced. The CoRe and PaP eRs methodology offers an exciting new way of capturing and portraying science teachers' pedagogical content knowledge so that it might be better understood and valued within the profession. This book is a concrete example of the nature of scholarship in science teaching that is meaningful, useful, and immediately applicable in the work of all science teachers, preservice in service, and science teacher educators. It is an excellent resource for science teachers as well as a guiding text for teacher education. Understanding teachers' professional knowledge is critical to our efforts to promote quality classroom practice. While PCK offers such a lens, the construct is abstract. In this book, the authors have found an interesting and engaging way of making science teachers' PCK concrete, useable, and meaningful for researchers and teachers alike. It offers a new and exciting way of understanding the importance of PCK in shaping and improving science teaching and learning. Professor Julie Gess, Newsome Dean of the Graduate School of Education, Willamette University. This book contributes to establishing CoRes and PaP eRs as immensely valuable tools to illuminate and describe PCK. The text provides concrete examples of CoRes and PaP eRs completed in real-life teaching situations that

make stimulating reading The authors show practitioners and researchers alike how this approach can develop high quality science teaching Dr Vanessa Kind Director Science Learning Centre North East School of Education Durham University
