Academic Writing Eija Ventola, Anna Mauranen, 1996-03-15 Writing is crucial to the academic world. It is the main mode of communication among scientists and scholars and also a means for students for obtaining their degrees. The papers in this volume highlight the intercultural generic and textual complexities of academic writing. Comparisons are made between various traditions of academic writing in different cultures and contexts and the studies combine linguistic analyses with analyses of the social settings in which academic writing takes place and is acquired. The common denominator for the papers is writing in English and attention is given to native English writers and non-native writers' problems in different disciplines. The articles in the book introduce a variety of methodological approaches for analyses and search for better teaching methods and ways of improving the syllabi of writing curricula. The book as a whole illustrates how linguists strive for new research methods and practical applications in applied linguistics.

Academic Writing in Engineering Amir Yazid Ali, Norlida Ahmad, Amirah Athirah Amir Yazid, A well-formatted academic document filled with the required contents can captivate reading and help students in scoring high marks. This book discusses ways to write good academic writings for engineering students. The common sections such as abstracts, introduction, literature review, methodology, results, discussion, and conclusion are explained in detail. This book also explains how to write the sections appropriately for academic reports such as laboratory reports, capstone reports, design reports, final year project reports, and research writing such as final year thesis, master's thesis, doctoral dissertation, and research manuscript.

Assessment for Experiential Learning Cecilia Ka Yuk Chan, 2022-09-29 Chan's book explores the challenges in assessing experiential learning, deepens our understanding, and inspires readers to think critically about the purpose of assessment in experiential learning. Experiential learning has been studied and proven to be effective for student learning, particularly for the development of holistic competencies, i.e., 21st-century skills, soft skills, transferable skills, considered essential for individuals to succeed in the increasingly global and technology-infused 21st-century society. Universities around the world are now actively organising experiential learning activities or programmes for students to gain enriching and diversified learning experiences; however, the assessment of these programmes tends to be limited, unclear, and contested. Assessment plays a central role in education policies and students' approach to learning. But do educators know how to assess less traditional learning such as service learning, entrepreneurship, cross-discipline or cross-cultural projects, internships, and student exchanges? While the current assessment landscape is replete with assessments that measure knowledge of core content areas such as mathematics, law, languages, science, and social studies, there is a lack of assessments and research that focus on holistic competencies. How do we assess students' ability to think critically, problem-solve, adapt, self-manage, and collaborate? Central to the discussion in this book is the reason students are assessed and how they should be assessed to bring out their best learning outcomes. Offering a collection of best assessment practices employed by teachers around the

world this volume brings together both theoretical and empirical research that underpins assessment and perceptions of different stakeholders understanding of assessment in experiential learning from students teachers and policymakers The idea of assessment literacy also plays an important role in experiential learning for example reflection is often used in assessing students in experiential learning but how reflection literate are educators are they aware of the ethical dilemmas that arise in assessing students These questions are discussed in detail The volume also introduces a quality assurance programme to recognise student development within experiential learning programmes The book will be particularly informative to academic developers teachers students and community partners who struggle with the development and assessment for experiential learning those who plan to apply for funding in experiential learning and policymakers and senior managements seeking evidence and advice on fine tuning curricular assessment designs and quality assurance The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license
