1)What is the difference between selenium 3 and selenium 4.

- Selenium 3 uses the JSON wire protocol and selenium 4 uses W3C standardization.
- Native Support was removed for browsers like Opera and PhantomJs in selenium 4.
- Selenium IDE was only available as a Firefox extension in version 3. However, in selenium version 4 IDE is available for Chrome as well.
- Unlike selenium 3, Selenium 4 provides native support for chrome DevTools.
- Selenium 4 has introduced Relative locators that allow testers to find elements relative to another element in DOM.
- Docker support has been added to the Grid server for more efficient parallel execution.

2) Which selenium web driver locator should be preferred?

ID is the preferred choice because it is less prone to changes. However, CSS is considered to be faster and is usually easy to read. XPath can walk up and down the DOM, which makes XPath more customizable.

3)Explain difference between findElement() and find elements().

- **findElement()**: This command is used for finding a particular element on a web page. It is used to return an object of the first found element by the locator. Throws NoSuchElementException if the element is not found.
- **find elements()**: This command is used for finding all the elements in a web page specified by the locator value. The return type of this command is the list of all the matching web elements. It returns an empty list if no matching element is found.

4)Explain the difference between Thread.Sleep() and selenium.setSpeed().

- **Thread.Sleep()**: It causes the current thread to suspend execution for a specified period.
- **selenium.setSpeed()**: setSpeed sets a speed that will apply a delay time before every Selenium operation.

5)How to handle stale element reference exception?

The stale element exception occurs when the element is destroyed and recreated again in DOM. When this happens the reference of the element in DOM becomes stale. This can be handled in numerous ways.
