## **Jiji Solution Manual Heat Convection:**

Heat Convection Latif M. Jiji, 2009-11-09 Jiji's extensive understanding of how students think and learn what they find difficult and which elements need to be stressed is integrated in this work. He employs an organization and methodology derived from his experience and presents the material in an easy-to-follow form using graphical illustrations and examples for maximum effect. The second enlarged edition provides the reader with a thorough introduction to external turbulent flows written by Glen Thorncraft. Additional highlights of note: Illustrative examples are used to demonstrate the application of principles and the construction of solutions; solutions follow an orderly approach used in all examples; systematic problem-solving methodology emphasizes logical thinking, assumptions, approximations, application of principles, and verification of results; Chapter summaries help students review the material; Guidelines for solving each problem can be selectively given to students.

**Heat Transfer Essentials** Latif Menashi Jiji, 2002 Heat Transfer Essentials is a focused and concise one-semester textbook with synchronized PowerPoint lectures, solutions, and tutoring material designed for online posting. Its distinguishing features are: Essential Topics: Critical elements of heat transfer are judiciously selected and organized for coverage in a one-semester introductory course. Topics include conduction, convection, and radiation. PowerPoint Lectures: PowerPoint presentations are synchronized with the textbook. This eliminates the need for lecture preparation and blackboard use by the instructor and note-taking by students. Interactive Classroom Environment: Eliminating blackboard use and note-taking liberates both instructor and students. More time can be devoted to engaging students to encourage thinking and understanding through discussion and dialog. Problem Solving Methodology: Students are drilled in a systematic and logical procedure for solving engineering problems. The book emphasizes thorough process modeling, approximation, checking, and evaluation of results. Students can apply this methodology in other courses as well as throughout their careers. Special Problems: Mini-projects involving open-ended design considerations and others requiring computer solutions are included. Home Experiments: A unique set of simple heat transfer experiments designed to be carried out at home are described. Comparing experimental results with theoretical predictions serves as an effective learning tool. Online Solutions Manual: Solutions to problems are intended to serve as an important learning instrument. They follow the problem-solving methodology format and are designed for online posting. Online Tutor: A summary of each chapter is prepared for posting. Key points and critical conditions are highlighted and emphasized. Online Homework Facilitator: To assist students in solving homework problems, helpful hints and relevant observations are compiled for each problem. They can be selectively posted by the instructor. Outstanding Title: The first edition was selected by Choice Current Reviews for Academic Libraries among its outstanding titles in 2000.
