Exercise 2

(5+5=10 Marks)

Given the following program that deals only with positive integers:

```
public static void main(String[] args) {
int n = 8;
if (n>=10 || n==7) {
    System.out.println("The number is 7.");
    System.out.println(" or is outside the range 1 to 9.");
}
else
    if (n==1)
        System.out.println("The number is 1.");
    else
        if (n%2 == 0) {
            System.out.println("The number is 2, 4, or 8.");
            System.out.println("(That's a power of 2!)");
        }
        else {
            if (n%3 == 0) {
                System.out.println("The number is 3, 6, or 9.");
                System.out.println("(That's a multiple of 3!)");
            }
            else
                System.out.println("The number is 5.");
        }
}
```

a) Transform the program above to a program that uses **only** a switch statement.

Solution:

In the question, there was a mistake in the condition (n%2 ==0). For n=6, the first condition that holds is (n%2 ==0). In the correction, we will take that into consideration. According to the meaning of the code above, the corresponding program is:

```
public static void main(String[] args) {
        int n = 8;
        switch (n) {
            case 1:
                System.out.println("The number is 1.");
                break;
            case 2:
            case 4:
            case 8:
                System.out.println("The number is 2, 4, or 8.");
                System.out.println("(That's a power of 2!)");
                break;
            case 3:
            case 6:
            case 9:
                System.out.println("The number is 3, 6, or 9.");
                System.out.println("(That's a multiple of 3!)");
                break;
            case 5:
                System.out.println("The number is 5.");
                break;
        default:
            System.out.println("The number is 7.");
            System.out.println("   or is outside the range 1 to 9.");
```
