

# INVESTIGATING THE MAGNITUDE OF MAGNETIC FORCES

Magnets can pull or push on each other without touching. When magnets attract, they pull together. This is called an **attractive magnetic force**. When magnets repel, they push apart. This is called a **repulsive magnetic force**. The diagram shows the magnetic forces between two different pairs of magnets.

The strength of a force is called its **magnitude**. The greater the magnitude of a magnetic force, the stronger the attractive or repulsive force between the magnets. The magnitude of a magnetic force depends on the size of the magnets and the distance between them:

- The larger the size of the magnets, the greater the magnitude of the magnetic force between them.
- The smaller the distance between two magnets, the greater the magnitude of the magnetic force between them.

Look at the pairs of magnets in each problem below. Then answer the questions that follow.

**Note:** All magnets are made of the same material.

- 1.** Underneath each pair of magnets, write whether they would push away or pull toward each other. Draw a circle around the pair of magnets that shows an attractive magnetic force. Draw a box around the pair of magnets that shows a repulsive magnetic force.

- 2.** Circle the pair of magnets that has the greater magnetic force.

Explain why the pair of magnets you circled above has the greater magnetic force. Is this force attractive or repulsive?

### **Numerical Solution of Hybrid Nanofluid and Its Stability Over Permeable Wedge Sheet With Heat Transfer**

**Analysis** Aisha M. Alqahtani, Zeeshan, Waris Khan, Florentin Smarandache, Nidhal Becheikh, Roobaea Alroobaea, Taseer Muhammad, 2024-01-01 The inclusion of nanoparticles has the potential to improve the thermal efficiency of the base fluid. The field of nanofluid (NF) dynamics has attracted important attention due to its extensive range of practical uses like fuel cells, solar energy, medication administration, heat transfer, microfabrication, coolant applications, and other related domains. The aim of this study is to scrutinize the impact of Lorentz force, thermal energy, joule heating, heat source, and injection parameters and Brownian and thermophoretic diffusions on the hybrid nanofluid over the moving wedge. The stability inquiry is reported for the existing work in order to confirm the stable solutions that make the study unique. Novelty of the existing work is to investigate the hybrid nanofluid flow and its stability. The nanoparticles MoS<sub>2</sub> and Ag are suspended in ethylene glycol and water used as host fluids. The numerical solution is obtained from the dimensionless first order differential equations which are achieved from the basic flow phenomena through similarity alteration variables. The influence of emerging factors on flow phenomena is reported via graphs. The positive eigenvalues report stable solutions while the negative eigenvalues designate unstable solutions. It is perceived that due to Lorentz force the rate of the fluid declines while the temperature inside the flow channel enhances. The velocity profile decreases while the temperature and concentration increase with increasing quantities of permeable factors. Similarly, the Forchheimer number causes to enhance the flow rate and decrease the heat and concentration. The current analysis is validated by the published work *Electricity and Magnetism, Grades 6 - 12* John B. Beaver, Ph.D., Don Powers, Ph.D., 2010-01-04. Reinforce good scientific techniques. The teacher information pages provide a quick overview of the lesson while student information pages include Knowledge Builders and Inquiry Investigations that can be completed individually or as a group. Tips for lesson preparation materials lists strategies and alternative methods of instruction. A glossary, an inquiry investigation rubric, and a bibliography are included. Perfect for differentiated instruction. Supports NSE and NCTM standards plus the Standards for Technological Literacy. *Multi-Wavelength Investigations of Solar Activity (IAU S223)* International Astronomical Union. Symposium, International Astronomical Union, 2004. These Proceedings present the most recent results from the highly successful international solar space missions SOHO, CORONAS F, TRACE, RHESSI, YOHKOH, and ground observatories around the Earth reported at the IAU Symposium 223 held in St Petersburg, Russia, June 14-19, 2004. These include discussions of the current theories of solar dynamics and activity, new constraints provided by the multi-wavelength observations of the Sun from the interior to the heliosphere, as well as discussions of future coordinated plans and efforts of multi-wavelength investigations of the Sun. The Proceedings contain the material of seven plenary sessions and three round table discussions.

**Statistical Signal Processing Approach to Investigate Solar Internal Dynamics** Mofazzal Hossain Khondekar, 2026-02-23 Doctoral Thesis Dissertation from the year 2013 in the subject Physics Astronomy National Institute Of Technology Durgapur course Electronics and Communication Engineering language English abstract The thesis is titled Statistical Signal Processing Approach to Investigate Solar Internal Dynamics The research primarily investigates the internal dynamics of the Sun using statistical signal processing The Solar Neutrino Flux Density time series obtained from the Sudbury Neutrino Observatory SNO and the Total Solar Irradiance TSI time series taken from the Earth Radiation Budget Satellite ERBS are used as the signals under investigation in this thesis Solar Neutrino Flux Density which originates from the Sun s core contains information about the Sun s internal dynamics whereas Total Solar Irradiance TSI which provides the energy that determines the Earth s climate represents the dynamics of the Earth s climate The signals are pre processed by smoothing and filtering before the nature of their persistence is determined This major finding may help climatologists distinguish between solar and man made influences on climate The form of time dependence of the frequency content of the signals is found to determine the stationarity non stationarity behaviour of the signals The underlying periodicities have also been investigated and compared with the periodicities for other solar activities reported by other scientists The multifractal features of the signals are examined to capture the structural patterns of the signals Efforts have been made to bring to light the complexity of the signals which principally include understanding the nonlinear dynamics and chaos of the signals A statistical link between the observed neutrino flux and the solar irradiance data along with their mutual supportiveness has been discovered in this research thesis
