Definition

- 1) **Monomial**—What is a monomial?

The following are monomials:

2	$\frac{1}{2}$	-8.5
2x	$\frac{1}{2}y^2$	-8.5xy ²
0	9a ² b ³ c ⁴	$\sqrt{5}$

However, these are not monomials:

2 + x	x ² - 8.5
$\frac{9}{x}$	\sqrt{x}

So monomials can include:

So a monomial cannot have:

Investigating Monomials Tesccc Key:

Mathematical Investigations Phil DeMarois, Mercedes A. McGowen, Darlene Whitkanack, 2001 Reflective of AMATYC and NCTM standards for teaching mathematics this text the first in a series of two texts aims to make mathematics truly accessible to all students by taking an active approach to learning Focused on mathematical reasoning and problem solving strategies Mathematical Investigations presents a series of carefully sequenced investigations where students gather data and work collaboratively to discover key concepts The function concept is central to all topics from Chapter 3 forward and is explored through multiple representations This text explores variables notation and processes explicitly rather than assuming students have mastered these concepts in previous courses Content is explored in depth and contextual problems are revisited throughout the text to create a spiral that gives students multiple opportunities to master important skills and concepts Graphing calculators are integrated throughout the text to help students discover patterns and interpret data intelligently Students construct their knowledge of a particular topic in a real world context and then reinforce this knowledge through reflection practice and synthesis with other topics as they work through the text **CCSS**

Gröbner's Problem and the Geometry of GT-Varieties Liena Colarte-Gómez, Rosa Maria Miró-Roig, 2024-10-02 This book presents progress on two open problems within the framework of algebraic geometry and commutative algebra Gröbner's problem regarding the arithmetic Cohen Macaulayness aCM of projections of Veronese varieties and the problem of determining the structure of the algebra of invariants of finite groups We endeavour to understand their unexpected connection with the weak Lefschetz properties WLPs of artinian ideals In 1967 Gröbner showed that the Veronese variety is aCM and exhibited examples of aCM and nonaCM monomial projections Motivated by this fact he posed the problem of determining whether a monomial projection is aCM In this book we provide a comprehensive state of the art of Gröbner's problem and we contribute to this question with families of monomial projections parameterized by invariants of a finite abelian group called G varieties We present a new point of view in the study of Gröbner's problem relating it to the WLP of Artinian ideals GT varieties are a subclass of G varieties parameterized by invariants generating an Artinian ideal failing the WLP called the Galois Togliatti system We studied the geometry of the G varieties we compute their Hilbert functions a minimal set of generators of their homogeneous ideals and the canonical module of their

homogeneous coordinate rings to describe their minimal free resolutions We also investigate the invariance of nonabelian finite groups to stress the link between projections of Veronese surfaces the invariant theory of finite groups and the WLP Finally we introduce a family of smooth rational monomial projections related to G varieties called RL varieties We study the geometry of this family of nonaCM monomial projections and we compute the dimension of the cohomology of the normal bundle of RL varieties This book is intended to introduce Gr bner s problem to young researchers and provide new points of view and directions for further investigations

Algebraic Structures and Applications Ahmed Laghribi, Andr, Leroy, 2025-09-24 This volume contains the proceedings of two conferences NonCommutative Rings and their Applications NCRA VIII and Quadratic Forms Rings and Codes QFRC II that were held in August 2023 at Artois University Lens France The book contains a few survey papers and many research articles The latter have been written in an accessible style and should be of interest to specialists researchers and graduate students The subjects cover classical ring theory e g Baer rings separativity problem group algebras quasi duo coding theory MacWilliams identities codes over Galois rings or from Lie algebras Quadratic forms are also present in two important and nicely written papers Finally some papers offer new perspectives moving from classical ring theory to universal algebras and non associative structures
