Lab Manual For Web Programming:

Web Programming and Internet Technologies Scobey, Pawan Lingras, 2016-09-12 Web Programming and Internet Technologies An E Commerce Approach is written for the one term web programming course for first or second year students. It features a hands on learning approach where students are provided with information on a need to know basis. The text provides a running case study throughout and students then take the topics taught in each chapter and apply them to the development of an e commerce website. At the end of the text students will have a fully functional e commerce site.

Web Programming and Internet Technologies Porter Scobey, Pawan Lingras, 2012-02-15 Today's Web programmers are required to understand and use the tools and skills for both client and server side programming. Web Programming and Internet Technologies An E Commerce Approach provides an accessible comprehensive introduction to creating fully functioning websites with e commerce capabilities. Ideal for the one term course or as a self learning guide for professionals, the authors weave a continuing case study of a real world commercial enterprise throughout the text that gradually grows in sophistication. Introductory chapters ask readers to create a simple website that uses the basic features of XHTML. Readers will continue to modify and expand their early work creating a centralized mechanism for changing the look and feel of the site via cascading style sheets and incorporating JavaScript, PHP, MySQL and much more. A CD ROM is included with every new printed copy of the text and includes complete and pre tested XHTML and CSS markup for all web pages discussed as well as all associated JavaScript and PHP scripts and the data for setting up the MySQL database. With its hands on active learning approach, students using this new full color text will see and experience first hand the many levels and capabilities of programming for the world wide web.

Key Features: Based on a real business model, this text provides a comprehensive introduction to all aspects of creating a complete website with e commerce capabilities. Uses a project based approach that asks readers to develop a website whose functionality will parallel that of the real world case study in the text. Includes examples and screen shots of real websites throughout for readers to reference. Presents and utilizes mainstream and relevant open source and widely used technologies: XHTML, CSS, JavaScript, PHP, MySQL, XML and more. Every chapter concludes with a collection of activities to assure the reader has a full understanding of the chapter material. These activities include quick questions to test the reader's basic knowledge of the content, short exercises to improve basic understanding, exercises on the parallel project that guide the reader through creating his/her own fully functional commercial website, a section titled "What Else You May Want or Need to Know" containing additional information relevant to the chapter, and finally a reference section with links to websites for further details and explanations of the topics covered in the chapter. The accompanying CD ROM contains complete and pre tested XHTML and CSS markup for all web pages discussed in the text as well as all associated JavaScript and PHP scripts and the data for setting up the MySQL database. eBook version does not include the CD ROM.
