Introduction To Building Technology

Eric Fleming

Introduction To Building Technology:

Construction Technology Eric Fleming, 2009-02-12 This new textbook provides a comprehensive introduction to every aspect of the technology of low rise construction. It includes sub structure, site work, setting out and foundations and superstructure, flooring, roofs, finishes, fittings and fixtures. The material here covers the first year course requirement of all courses on which construction technology is taught, no matter what the ultimate qualification. It offers tried and tested solutions to a range of construction problems and is organised following the sequence of construction. It will show what has been done in the past, demonstrating good practice, what works and what doesn't, and common faults. There are summaries of the more important BSI documents and reference to the latest building regulations. Lengthy explanations are avoided by relying heavily on hundreds of illustrations, pairing detail drawings with clear photographs to show real life construction situations. The supporting spreadsheet referred to in the book can be found at this link: http://www.blackwellpublishing.com/pdf/fleming/Fleming_spreadsheet.xls

Barry's Introduction to Construction of Buildings Stephen Emmitt, Christopher A. Gorse, 2009-02-05 The five volume series Barry's Construction of Buildings has been established as a standard text on building technology for many years. However, a substantial update has long been required and while doing this, the opportunity has been taken to reduce five volumes to two in a more user friendly format. The introductory volume covers domestic construction and brings together material from volumes 1, 2 and part of 5. The extensive revision includes modern concepts on site assembly, environmental issues and safety and features further reading.

Introduction to Architectural Technology William McLean, 2008-10-06 Understanding the relationship between design and technology is critical to the understanding of architecture. Aimed clearly at architectural students, this book provides an accessible introduction to all aspects of architectural technology: structural physics, structural elements and forms, heating, lighting, environmental control and computer modeling. As well as providing a clear grounding in these topics, it will also help students to integrate their design thinking with appropriate structural and environmental solutions. The book sets out to explain the relationships between physical phenomena, materials, building elements and structural types using simple classification systems and real world examples. Photographs are used to familiarize the user with common construction technology while historical examples are employed to chart significant moments in the history of architectural engineering. Every topic area is accompanied by a set of cross references for further reading and research. In addition, this volume explores current computer techniques for assisting students to predict the structural and environmental behavior of buildings. It also uses historical precedents to explain how the success of a technology is directly related to its cultural context. Written by three experienced teachers, this book will be invaluable for those contemplating the study of architecture and for those already embarked on such a course.

Barry's Introduction to Construction of Buildings Stephen Emmitt, 2023-09-05 BARRY S INTRODUCTION TO CONSTRUCTION OF BUILDINGS Authoritative, well established, comprehensive, practical and highly illustrated guide to construction practice.

Barry's Introduction to Construction of Buildings provides the basic material an undergraduate student will need to understand how the majority of low rise buildings are constructed. The text explains construction technology through key functional and performance requirements for the main elements common to all buildings. The material in the Fifth Edition has been updated to ensure it covers the latest building regulations and current construction technology with particular attention paid to the decisions required on what and how to build to achieve a low carbon resilient built environment. Design technology, site assembly and environmental issues are all covered showing how buildings that are more efficient with lower embodied carbon are constructed. New in chapter questions better facilitate self reflection and learning. Barry's Introduction to Construction of Buildings contains information on General principles of construction regulations and approvals making choices and sources of information and responding to climate change. Site analysis, setup, security, bedrock and soil types, ground stability, drainage, strip pad and raft foundations and scaffolding. Functional requirements for floors including ground supported concrete floor slabs, timber upper floors, floor finishes and suspended timber ground floors. Pitched roofs and their coverings, sheet metal covering to low pitched roofs, flat roofs, thermal insulation in flat roofs, parapet walls and green roofs. Barry's Introduction to Construction of Buildings is an ideal learning resource for undergraduate students and those working towards similar NQF level 5 and 6 qualifications in building and construction. This title is a companion to Barry's Advanced Construction of Buildings. *Basics Building Technology* Bert Bielefeld, 2017. As building construction is becoming increasingly complex, the field of building technology is becoming more and more important. As an intermediary between all parties involved in a construction project, the architect must be able to understand what is involved and to advise his clients. This volume covers the fields of water supply and disposal, electric installations and the energy related subjects i.e. heating, ventilation and lighting. The compendium combines the successful individual volumes Room Conditioning and Water Cycles and supplements these with the two hitherto unpublished volumes Electric Installation and Lighting design. The student and architect are introduced to the basic principles, terms and systems of building technology installations and equipment.
