

HOW DO SOLAR PANELS WORK?

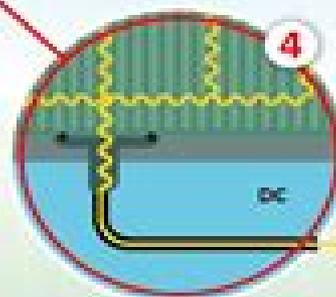

1
Light from the sun is made up of tiny particles called photons.

2
Photons hit the solar panel, knocking electrons free of the silicon atoms within the solar cells.

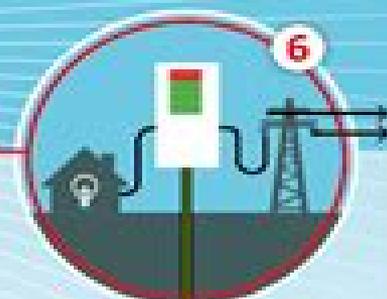

3
These loose electrons are now free to move, creating an electric current from the positive and negative charges now present. They pass through the layers of the solar cell.

4
The electric current flows to the edge of the panel into a conductive wire, which leads to the inverter.

5
The inverter converts the direct current (DC) to alternating current (AC), which is what is used to provide power.

6
This electricity then transfers to the building. If the solar panels are connected to the utility meter, excess electricity is transferred to the utility grid. This causes the meter to run backward, crediting the property for surplus generation.

Guide To Solar Power

JL Elias

Guide To Solar Power:

Yeah, reviewing a book **Guide To Solar Power** could increase your near friends listings. This is just one of the solutions for you to be successful. As understood, exploit does not recommend that you have astonishing points.

Comprehending as without difficulty as deal even more than new will offer each success. bordering to, the declaration as without difficulty as acuteness of this Guide To Solar Power can be taken as capably as picked to act.
