

Middle School Science Lab Report Format

Your lab report should represent organization, neatness and professionalism. This word-processed report is expected to be single-spaced, using 12-point Times New Roman or Tahoma font.

Creative cover page: Title is typed with large clear lettering and centered on the page. Include a picture that represents your project (either printed in color or printed in b/w and colored nicely). Your name, hour, teacher, and date, should be in the lower right-hand corner of the page.

I) Introduction:

A) This section explains the *purpose* of doing this lab.
Ex. The purpose of this _____ lab is to...

B) It is here that you give *background information* on the general topic that the lab is studying to help a reader of your lab report to understand the problem. You may need to refer to your textbook, notes from the teacher, library books, credible Internet sources, etc. Include as much as you can find that is relevant to the topic. *Keep track of all sources for your bibliography.

II) Experimental Design

A) The *experimental question/problem* that accurately states what is being investigated. What is the question you are going to answer? The problem should be stated as clearly as possible and written as a question that cannot be answered with "yes" or "no."

B) The *independent variable*. The variable that you are going to alter or change throughout your experiment, identified after the word "if" in your hypothesis.

C) The *dependent variable*. The variable that you are measuring, identified after the word "then" in your hypothesis. Also, note the operational definition of how you will measure your dependent variable (time in seconds, distance in meters, etc.).

D) The *control*. What are you using for a comparison? The control condition can be thought of as the "baseline" or "normal" condition.

III) Hypothesis

The *hypothesis* suggests an answer to the above experimental question. It is an educated, scientific guess taking into consideration the background information you researched, prior knowledge or evidence that you have.

You write a hypothesis in the *if/then/because* format.

If...(independent variable), **then...**(dependent variable), **because**...a reason for your prediction.

Ex: **If** different *types* of racquetballs are dropped, **then** they will bounce to different *heights*, **because** they are made of different materials.

IV) Test

This section contains a *bulleted list of materials* you used. Be sure to give the sizes of beakers/cylinders used, quantities of items. Be specific and descriptive with every item.

This section is a *list of numbered steps in the order* that you took to complete the lab. The reader should be able to use this section to duplicate your experiment exactly. Your description should be detailed, concise and specific. Write in complete sentences (starting with a verb and ending with a period) and list exact quantities and techniques.

V) Observations

This section contains a summary of your data in the form of graphs, tables, diagrams, calculations, etc. All of these should be labeled appropriately. This section is just for graphs, tables, and diagrams. **Do not** give interpretations, explanations, or inferences of your data as this belongs in the discussion section.
