Introduction

Instructor

My name is John Steely, and I have been teaching for almost 30 years. I have been primarily a mathematics teacher, but along the way I have taught many other subjects, including leadership, economics, and problem solving. I have worked in the financial sector, retail sector, and information technology sector as well. This is the experience that I will bring to bear on this course, and I hope that you can benefit from my expertise.

Subject

Problem solving is an incredibly valuable skill for an employee in today's world. Take a look at any job description beyond the cashier level, and you will find problem solving in one form or another. The ability to solve problems can determine your success in any field, any career.

Problem solving has many different phases, which we will study in this course. In its simplest terms, problem solving involves the ability to understand the current circumstances, create a plan of action, act on that plan, and evaluate the results. We will be working with a particular heuristic, or system, for solving problems, which is one of many. I encourage you to work with this system until you are comfortable with it; then you can explore others from a position of strength.

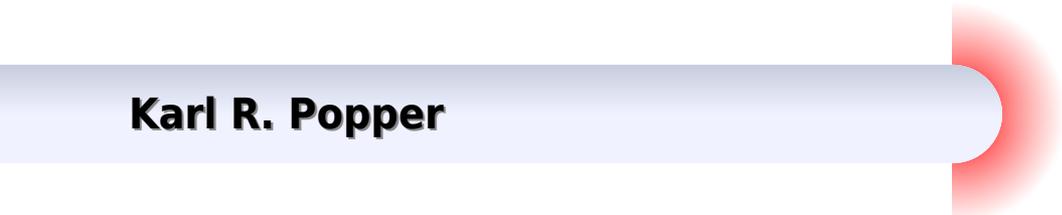

Daily schedule

Each week our class will be divided into several pieces. The first piece, which will typically last about 15 minutes, involves a video presentation. The second piece, which will last about 1 hour in most cases, will involve a lecture about a particular part of the problem solving heuristic. The third piece will be an activity designed to improve your problem solving skills, and will last about 45 minutes to an hour. Each even week will have a quiz on the material of the previous weeks, which should take about 15 minutes. Finally, there will be a section about some aspect of arithmetic, last about 45 minutes.

Gs1140 Problem Solving Theory:

Toward a Unified Theory of Problem Solving Mike U. Smith, 2012-11-12 One of the most active fields of educational research in recent years has been the investigation of problem solving performance Two opposing views of current research one suggesting that there are more differences than similarities within different domains and the other stating that there is great similarity lead to a variety of questions Is problem solving a single construct Are there aspects of problem solving performance that are similar across a variety of content domains What problem solving skills learned within one context can be expected to transfer to other domains The purpose of this book is to serve as the basis for the productive exchange of information that will help to answer these questions by drawing together preliminary theoretical understandings sparking debate and disagreement raising new questions and directions and perhaps developing new world views Everyday Problem Solving Jan D. Sinnott, 1989-01-18 Psychological educational gerontological marketing and other literatures all report recent research in everyday problem solving yet few sources have made these various types of results available in one state of the art volume Everyday Problem Solving makes accessible many of these points of view for all readers coordinates them and provides directions from which to formulate new studies The wide but methodical scope of this work will interest researchers clinicians philosophers marketing specialists administrators artificial intelligence scientists educators guidance counselors and psychologists Undergraduate and graduate students in these fields will also find this an invaluable source The collection of reports includes an examination of models from information processing theory and postformal cognitive developmental theory and an overview of the tasks used in everyday problem solving research Several leading theories including Sinnott's are applied to describe the thoughts and emotions of adults as they solve illstructured problems Reports on applied research include techniques of master teachers the ways adults resolve conflicts consumer behavior academic intelligence the connection of memory to problem solving intervention strategies and the elderly *Problem Solving: Research, Method, and Theory* Benjamin Kleinmuntz, 1975 Psychology of Problem Solving, 1975 *Problem Solving* Daniel Ellis Berlyne, 1975 **How to Solve Problems. problem spaces General problem theory is the theory of problem solving in irregular problem spaces the domain of subjective non quantitative problems that also includes regular problem spaces as a special case Because it only applies to regular problem spaces the scientific method cannot solve the vast majority of human problems General problem theory defines a theoretical framework that explains how to use formal methods to study and solve any kind of problem effectively extending the scientific method to cover the entire subjective sphere The foundation for this theory is a radical reconception of the unknown itself It turns out that the unknown has actual physical properties that can be expressed in quantitative formulas knowledge of which opens up entirely new avenues of learning and reasoning that allow us to connect the subjective and objective domains This is an advanced work and should not be attempted before studying Ultrareasoning Principles and Practices of Faceted Model Oriented Reasoning
