**Security and Privacy by Combining Biometrics with Cryptography** Sanjay Kanade, Dijana

Petrovska-Delacretaz, Bernadette Dorizzi, 2022-05-31. This book deals with crypto biometrics, a relatively new and multi-disciplinary area of research started in 1998. Combining biometrics and cryptography provides multiple advantages such as revocability, template diversity, better verification accuracy, and generation of cryptographically usable keys that are strongly linked to the user identity. In this text, a thorough review of the subject is provided, and then some of the main categories are illustrated with recently proposed systems by the authors. Beginning with the basics, this text deals with various aspects of crypto biometrics, including review, cancelable biometrics, cryptographic key generation from biometrics, and crypto biometric key sharing protocols. Because of the thorough treatment of the topic, this text will be highly beneficial to researchers and industry professionals in information security and privacy. Table of Contents: Introduction, Cancelable Biometric System, Cryptographic Key Regeneration Using Biometrics, Biometrics Based Secure Authentication Protocols, Concluding Remarks.

Face Detection and Recognition Asit Kumar Datta, Madhura Datta, Pradipta Kumar Banerjee, 2015-08-26 Face detection and recognition are the nonintrusive biometrics of choice in many security applications. Examples of their use include border control, driver's license issuance, law enforcement investigations, and physical access control. *Face Detection and Recognition: Theory and Practice* elaborates on and explains the theory and practice of face detection and recognition systems currently in vogue. The book begins with an introduction to the state of the art, offering a general review of the available methods and an indication of future research using cognitive neurophysiology. The text then explores subspace methods for dimensionality reduction in face image processing, statistical methods applied to face detection, and intelligent face detection methods dominated by the use of artificial neural networks. Covers face detection with colour and infrared face images, face detection in real time, face detection and recognition using set estimation theory, face recognition using evolutionary algorithms, and face recognition in frequency domain. Discusses methods for the localization of face landmarks helpful in face recognition, methods of generating synthetic face images using set estimation theory, and databases of face images available for testing and training systems. Features pictorial descriptions of every algorithm as well as downloadable source code in MATLAB, PYTHON, and hardware implementation strategies with code examples. Demonstrates how frequency domain correlation techniques can be used, supplying exhaustive test results. *Face Detection and Recognition: Theory and Practice* provides students, researchers, and practitioners with a single source for cutting edge information on the major approaches, algorithms, and technologies used in automated face detection and recognition.      *Index to Theses with Abstracts Accepted for Higher Degrees by the Universities of Great Britain and Ireland and the Council for National Academic Awards* ,2008 Theses on any subject submitted by the academic libraries in the UK and Ireland      **Facial Recognition System** Divya Sushma, 2011-11
