

FACETS OVERVIEW

Overview takes input feature data from any number of datasets, analyzes them feature by feature and visualizes the analysis.

Overview gives users a quick understanding of the distribution of values across the features of their dataset(s). Uncover several uncommon and common issues such as unexpected feature values, missing feature values for a large number of observation, training/serve skew and train/test/validation set skew.

A Faceted Approach to the Modeling of Scientific Data Clayton Keith Huffer, 1993

Constructing Measures Mark Wilson, 2023-06-05 Constructing Measures introduces a way to understand the advantages and disadvantages of measurement instruments. It explains the ways to use such instruments and how to apply these methods to develop new instruments or adapt old ones based on item response modeling and construct references. Now in its second edition, this book focuses on the steps taken while constructing an instrument and breaks down the building blocks that make up an instrument: the construct map, the design plan for the items, the outcome space, and the statistical measurement model. The material covers a variety of item formats including multiple choice, open ended, and performance items, projects, portfolios, Likert and Guttman items, behavioral observations, and interview protocols. Each chapter includes an overview of the key concepts, related resources for further investigation, and exercises and activities. A variety of examples from the behavioral and social sciences and education, including achievement and performance testing, attitude measures, health measures, and general sociological scales, demonstrate the application of the material. New to this edition are additional example contexts including a cognitive achievement example, an attitude example, and a behavioral example, and new concentrations on specific measurement issues and practices such as standard setting, computer delivery, and reporting, and going beyond the Likert response format. Constructing Measures is an invaluable text for undergraduate and graduate courses on item test or instrument development, measurement item response theory, or Rasch analysis, taught in a variety of departments including education, statistics, and psychology. The book also appeals to practitioners who develop instruments.

Handbook for Evaluating Knowledge-Based Systems Leonard Adelman, Sharon L. Riedel, 1997-04-30 Knowledge based systems are increasingly found in a wide variety of settings and this handbook has been written to meet a specific need in their widening use While there have been many successful applications of knowledge based systems some applications have failed because they never received the corrective feedback that evaluation provides for keeping development focused on the users needs in their actual working environment This handbook provides a conceptual framework and compendium of methods for performing evaluations of knowledge based systems during their development Its focus is on the users and subject matter experts evaluation of the usefulness of the system and not on the developers testing of the adequacy of the programming code The handbook permits evaluators to systematically answer the following kinds of questions Does the knowledge based system meet the users task requirements Is the system easy to use Is the knowledge base logically consistent Does it meet the required level of expertise Does the system improve performance The authors have produced a handbook that will serve two audiences a tool that can be used to create knowledge based systems practitioners developers and evaluators and a framework that will stimulate more research in the area academic researchers and students To accomplish this the handbook is built around a conceptual framework that integrates the different types of evaluations into the system of development process The kinds of questions that can be answered and the methods available for answering them will change throughout the system development life cycle And throughout this process one needs to know what can be done and what can t It is this dichotomy that addresses needs in both the practitioner and academic research audiences
