

Oil Exploration & Production

Completion

Introduction

- After exploratory drilling confirms the presence of an oil or natural gas reservoir, the hydrocarbons are brought to the surface.
- Once the design well depth is reached, the formation is tested and evaluated to determine whether the well is to be completed for production, or plugged and abandoned.
- This decision is taken based on the information available on reservoir characteristics.
- To complete the well production, casing is installed and cemented, and the drilling rig is dismantled and moved to the next site.
- A service rig is brought in to perforate the production casing and run production tubing along with downhole equipments.
- The installation of surface safety equipments takes place and production begins.
