

## LIZARD EVOLUTION VIRTUAL LAB

Answer the following questions as you finish each module of the virtual lab or as a final assessment after completing the entire virtual lab.

### Module 1: Ecomorphs

1. At the beginning of the virtual lab, you were asked to sort eight lizards into categories. What criteria did you initially use to make your groups? Did you revise your criteria later? Why?

I separated the lizards by color, such a brown, brown and spotted, and green. I did not bother with length at the beginning.

2. An adaptation is a structure or function that is common in a population because it enhances the ability to survive and reproduce in a particular environment. Provide one example and an explanation of one adaptation in the *Anolis* lizards.

One adaptation, such as large toe pads is important because it allows a lizard to climb better. The lizards at the top need these.

3. Provide one evolutionary explanation for why lizards living in the same part of the habitat (i.e., grass) would have similar characteristics.

They need to have similar abilities or else they will not survive there. A lizard lives specific to its traits.

4. What is an ecomorph? Provide one example from the virtual lab.

An eco morph is a species who has the same structural habitat, but are not the same as the original species. An example is the grass-bush anole.

How is an ecomorph different from a species?

They evolve into different forms to help survive.  
They evolve to survive their habitat.

6. Explain how a particular body feature of one of the lizard ecomorphs from the virtual lab is an adaptation to their particular niche.

Crown Giant Ecomorphs live at the top of the trees. They are large in size and have long legs to jump from tree to tree, which is important for their habitat.
