

# CIRCULATION FOLDOUT ACTIVITY

WONDER at the WORLD

Deoxygenated blood from the body enters the right side of the heart.

The heart pumps the deoxygenated blood towards the lungs to collect oxygen and remove carbon dioxide.

After collecting oxygen, blood enters the left side of the heart and is pumped out through the aorta.

Thick blood vessels called arteries then transport the oxygenated blood around the body.

Tiny capillaries help move oxygen from the arteries into cells, and transport carbon dioxide out.

Veins transport the deoxygenated blood back to the heart to restart the cycle.

heart

artery
