

NMNC 2310 Study Guide

Inflammation / Tissue Integrity / Inflammation and Wound Healing / Postoperative Care / Lower Gastrointestinal Problems

Postoperative Care

- * Look in nursing diagnosis book for applicable nursing diagnoses and the related interventions
Respiratory (atelectasis & aspiration) / Mobility / Pain / knowledge / circulatory / effects of anesthesia

Remember

- * Take and evaluate VS including o2 sat and do a head to toe assessment right away upon admission to unit
- * What can be properly delegated?
- * Monitor means to carefully monitor (request complete assessment - Head to Toe, labs, and every other pertinent medical test)
- * WNL VS for every age group - ***Interpreting VS*** any changes noted at all for better or worse?
- * Continual assessment and documentation of all body systems for any changes good or bad

What are the focused assessment(s)? VS / respiratory / circulatory / neurological / skin integrity / wound / endocrine (pt is a DM = slow wound healing) / gastrointestinal / genitourinary / nutritional / psychosocial / knowledge / NPO / musculoskeletal (CMS, need assistance with mobility?)

- * **Assessment** — Begin with evaluation of the VS including the o2 sat
WNL for each age group considering the pt individual trend (newborn, toddler, child, teenager, adult, elderly) Effects of 1. anesthesia 2. stress from surgical procedure physically emotionally on family unit (also tailored towards the individual considering their trends, and with knowledge of the offending disease and surgical procedure, all insertion sites for infection and infiltration (be sure to be able to describe each), clearly describe all output (emesis, BM, mucous, purulence, smell of breath, color of urine, any and all drainage from a tube and from the patient with understanding of the implications and meaning of any drainage)
 - * **Interventions** —(including the rational for each intervention [be sure to know why the intervention is best and understand the science behind our actions: ambulation encourages peristalsis and passing flatus, which helps decrease pain]), priority actions depending on pt VS and circumstances (sometimes only intervention is to document findings or monitor, increase fluids, call surgeon or anesthesiologist for new orders, encourage deep breaths, turn to side, elevate Head of Bed HOB, place BG, ambulate, provide emotional support, sit by pt, document color and consistency of drainage once per shift at least, medicate if too much pain to move or breathe, what to teach the patient)
 - * **Evaluation** — (have your goals been met as you implemented your EBP interventions)
- Risk factors for, s/sx of, and interventions for complications r/t surgery**— DVT/ hypovolemia / fluid and electrolyte imbalance (high and low potassium & sodium & magnesium & BG (like elevated BG can lead to impaired wound healing), hypothermia, over radiation, nontherapeutic reaction to anesthesia

Labs — CBC, chemistry (electrolytes, BG, liver studies), Creatinine, BUN

Medications and Treatments— reason for, side effects of, special teachings for, proper application

Acetaminophen, ibuprofen, ketorolac, IV morphine, IV dilaudid, Lorab, oxycodone, Corticosteroids, oxygen (for medicine r/c, or hyperbaric wound chamber), application of heat or cold, applicable antibiotics (ordered per the offending organism), narcosis, laxix
