

Installing the Exciter

- Excite that the power supply and network are turned off to prevent electrical shock or damage to equipment.
- Touch your hand to ground to discharge any electrostatic charge before handling the Factor.

The steps below correspond to the numbers in Figure 1.

- Excite and record the FanWorks Identification number onto the facility floor plan, indicating the Factor's position and network wiring path. Use the rear-pano marker on the Factor's Name ID label.
 - Install the supplied floor connector or PDU socket according to the manufacturer's instructions and connect it to the terminal, or device in the wiring diagrams. Connect the FanWorks Network DN, Network IN, V, and Power Supply to the terminal blocks, as shown in the wiring diagrams. If the Factor is at the end of the network, then terminate the network segment with Term A (100-Ω terminator). Refer to Detail A, and locate the terminal pin for connection to the Factor.
- Note:** If installing brackets or accessory devices, or if using a master/slave configuration, proceed to the relevant section on the opposite page, and then return to steps 3 and 4.
- Excite that the upper 140mm of the Factor will be visible. Refer to the facility floor plan to locate, and using the Factor's Marker or compass mark the location of the floor-mounting holes. Drill the holes.

- Mount the Factor.
- L-bracket installation
 - Install to the floor-mounting holes
 - 4 hollow wall anchors
 - Attach the Factor to the L-bracket, using
 - 4 No. 10 screws and machine washers
 - 4 washers and lock washers
 - 4 No. 10 screws and the washers
 - Attach the assembled Factor and L-bracket to the previously installed hollow wall anchors, using
 - 4 No. 10 wood screws x 1 in. long
- Surface socket installation
 - Install to the floor-mounting holes
 - 4 hollow wall anchors
 - Insert into the wall anchors, leaving 1/8 in. (3.175 mm) out of the shell exposed.
 - 4 No. 10 wood screws x 1 in. long
 - If using surface wire conduit, attach the floor-supplied Suspensor (Term B in Figure 1) to the underside of the Factor.
 - Align the Factor with the mounting screws, and while lightly pressing, slide until it is securely in place. Insert the supplied cover caps.

Installation is complete. Proceed to Final Steps below.

Installing Keyboards

A single keypad may be connected to an Excite to enable an operator to be signed out at the door. The keypad also releases the Excite's safety, for example, to discharge a magnetic door lock. Keys use the Wingard standard KTP-10000 keypad, which offers individual passwords for each user.

Refer to the Keys Installation Manual and the manufacturer's instructions. Keypads may be connected to either master or slave Excite.

Note: The keypad requires a separate 12 VDC power supply.

Installing Accessory Devices

Each Excite has two 50-MHz, 1-Amp, 100-watt AC outlets for connecting accessory devices, such as magnetic door locks and high-capacity doors.

Refer to the Keys Installation Manual and the manufacturer's instructions for installation procedures. Devices may be connected to either master or slave Excites; connect devices to the master Excite's outlet first, then connect additional devices to the slave Excite, starting with the doors.

Note: Accessory devices require their own power supply.

Master/Slave Installations

Master and slave Excites are installed and connected to the FanWorks network in the same way as other Excites, with the following additions:

At least one master/slave group is necessary to allow signing out. The Master and slave terminals using 20-WPC wires, as shown in the wiring diagrams.

For slave Excites using their own I/O modules, the following is also required, as shown in Figure 1:

- The mag lock (or door lock) requires an outlet to the other side both the master and the slave to ensure that all doors in the vicinity will lock when a sign is pressed.
- Door contacts are wired together in series so the door contact input on both the master and the slave. The result is that when any door in a master/slave configuration is open, the system behaves as if all doors are open so that will occur if a sign is at a door in the vicinity of a door that is open.

Final Steps

Do not supply power to the Excite or any other network device until all connections are complete.

Once all devices are installed, power up the Factor and other devices in the Keys system software, run Auto Configure to install the new devices, and then configure them for operation.

The coverage area of each Excite must also be checked.

Refer to the Keys Installation Manual (p/n 4000001) for detailed information on how to complete these steps.
