### Visualizing Data with Charts:

Charts are a great way to share data and information. The foundation of charts is the data they illustrate. Choosing the right data is the first and most important step in creating a chart.

#### Create Charts:

##### Choose the right data:

When selecting a chart, it's important to decide what data needs to be included in it.

##### What is the main point?

What is the purpose of the chart? Identify the point of the chart, and then include the data that illustrates this point and puts it in context.  **What is the truth?**

Avoid spinning the data. Communicate what the data shows, not what it should to say.

##### Keep it simple.

Only show the data that is relevant. This makes it easier to process the information that is important. Make sure that the rest of the data is available so that conclusions are backed up with ample evidence.

##### Select the data:

Once data and labels are chosen to be included in the chart, select them.

1. Click and drag to select the desired cells to include in the chart. To select multiple non-adjacent cells, select a cell or cell range and hold down the <Ctrl> key while selecting other cells.

##### Tips:

- ✓ If a value changes in the chart's data source, that change is automatically updated in the chart.
- ✓ If labels are not included in the selected cell range, Excel will insert placeholders in the chart.
