Experiments In Topology

Jonathan James Oleszkiewicz

Experiments In Topology:

Experiments in Topology Stephen Barr, 1989-01-01 A mathematician named Klein thought the Moebius band was divine. Said he: If you glue the edges of two squares together, you'll get a weird bottle like mine. Stephen Barr. In this lively book, the classic in its field, a master of recreational topology invites readers to venture into such tantalizing topological realms as continuity and connectedness via the Klein bottle and the Moebius strip. Beginning with a definition of topology and a discussion of Euler's theorem, Mr. Barr brings wit and clarity to these topics. New Surfaces, Orientability, Dimension, The Klein Bottle, etc. The Shortest Moebius Strip, The Conical Moebius Strip, The Klein Bottle, The Projective Plane, Symmetry, Map Coloring, Networks, Koenigsberg Bridges, Betti Numbers, Knots, The Torus, Continuity and Discreteness, Next Number, Continuity, Neighborhoods, Limit Points, Sets, Valid or Merely True, Venn Diagrams, Open and Closed Sets, Transformations, Mapping, Homotopy. With this book and a square sheet of paper, the reader can make paper Klein bottles step by step, then by intersecting or cutting the bottle, make Moebius strips, conical Moebius strips, projective planes, the principle of map coloring, the classic problem of the Koenigsberg bridges, and many more aspects of topology are carefully and concisely illuminated by the author's informal and entertaining approach. Now in this inexpensive paperback edition, *Experiments in Topology* belongs in the library of any math enthusiast with a taste for brainteasing adventures. [Experiments in Topology](#) Stephen

Barr, 1972 **Experiments in topology** Stephen Barr (matematik.), 1965 **Experiments in Topology. (Illustrations Drawn by Ava Morgan.)** Stephen Barr, 1965 **Comparison of Statistical Experiments** Erik Torgersen, 1991-03-14

There are a number of important questions associated with statistical experiments: when does one given experiment yield more information than another? how can we measure the difference in information? how fast does information accumulate by repeating the experiment? The means of answering such questions has emerged from the work of Wald, Blackwell, LeCam, and others, and is based on the ideas of risk and deficiency. The present work, which is devoted to the various methods of comparing statistical experiments, is essentially self-contained, requiring only some background in measure theory and functional analysis. Chapters introducing statistical experiments and the necessary convex analysis begin the book and are followed by others on game theory, decision theory, and vector lattices. The notion of deficiency, which measures the difference in information between two experiments, is then introduced. The relation between it and other concepts such as sufficiency, randomisation, distance, ordering, equivalence, completeness, and convergence are explored. This is a comprehensive treatment of the subject and will be an essential reference for mathematical statisticians. *Experiments in Topology* William Wilson
