

Ch 5 Genetic Disorders Study Guide

Concepts to Know

- An example of a human trait that is controlled by more than one gene is skin color
- A person who has one recessive and one dominant allele for a trait is called a carrier
- A genetic disorder in which a person's blood clots very slowly if at all is hemophilia
- The crossing of two individuals that have similar characteristics is referred to as inbreeding
- The transfer of genes from one organism to another is called genetic engineering
- A chart that tracks which members of a family have a particular trait is called a pedigree
- The sex chromosomes determine if a person is a male or female
- In a pedigree, a square is used to represent a male
- An abnormal condition that a person inherits through genes or chromosomes is a genetic disorder
- People with an extra copy of chromosome 21 have a disorder called Down syndrome
- A genome is all the DNA in one cell of an organism
- Professionals who help couples understand their chances of having a child with a particular genetic disorder are called genetic counselor
- In hybridization, breeders cross two genetically different individuals
- A clone is an organism that is genetically identical to the organism from which it was produced
- Inserting working copies of a gene directly into the cells of a person with a genetic disorder is referred to as gene therapy
- Three or more forms of a gene that code for a single trait are called multiple alleles
- Sex-linked recessive traits are more common in males
- Cystic fibrosis is a genetic disorder in which the body produces abnormally thick mucus
- The process of selecting few organisms with desired traits to serve as parents of the next generation is called selective breeding
- In DNA fingerprinting, a person's DNA is cut into fragments, which are separated to form a pattern
- Smile dimples are controlled by a dominant allele on a single gene. Whitney has smile dimples but her husband Alberto and son Pedro do not. What is the chance that Whitney and Alberto's next child will have smile dimples? Draw a Punnett square to show how you arrived at your answer.
 - The chance is 50%. Smile dimples are a dominant trait, so Alberto and Pedro both have the dd genotype. Therefore, Whitney must be Dd, and 50% of the children of a Dd x dd cross should have smile dimples.
