Handbook of Coastal Disaster Mitigation for Engineers and Planners Miguel Esteban,Hiroshi Takagi,Tomoya Shibayama,2015-07-29 The world s population is expected to increase to over 8 billion by 2020 About 60% of the total population of the world lives in coastal areas and 65% of the cities with a population of over 2 5 million are located in coastal areas Written by an international panel of experts in the fields of engineering and risk management The Handbook of Coastal Disasters Mitigation presents a coherent overview of 10 years of coastal disaster risk management and engineering during which some of the most relevant events of recent time have taken place including the Indian Ocean tsunami hurricanes Katrina and Sandy in the United States or the 2011 Japanese tsunami International case studies offer practical lessons on how disaster resilience can be improved in the future Contains tools and techniques for analyzing and managing the risk of coastal disasters Provides engineering measures for mitigating coastal vulnerability to tsunamis tropical cyclones and hurricanes Includes crucial tactics for rehabilitation and reconstruction of the infrastructure **ICE Manual of**

Geotechnical Engineering Volume 1 Hilary Skinner,D G Toll,Kelvin Higgins,Mike Brown,John Burland,2023-11-17 ICE Manual of Geotechnical Engineering Second edition brings together an exceptional breadth of material to provide a definitive reference on geotechnical engineering solutions Written and edited by leading specialists each chapter provides contemporary guidance and best practice knowledge for civil and structural engineers in the field **CIRIA Index of Technical Publications** Dargan Bullivant Associates,Construction Industry Research and Information Association,1968

Structural Design in Building Conservation Dimitris Theodossopoulos,2012-07-26 No building is properly conserved if it is not structurally sound Consequently architects engineers and conservation officers need an adequate grounding in the technology the materials and the historic origins of the building in order to complete a conservation project successfully Structural Design in Building Conservation deals with design issues and technical choices showing how they are integrated with the planning and architectural outcomes in a conservation project It brings together theory with current conservation technology discussing the possibilities of structural details and strategies in architectural expression Case studies are central to this and these are organised around such themes as the addition of roofs requalification of space strengthening and re use of fabric reprimination additions completions stiffness adjustments and the correction of past mistakes The reader is encouraged to examine the technical details of these real projects and explore the possible solutions The philosophy of structural interventions is introduced in the context of conservation theories and practices in various European countries The main types of strengthening repairs and interventions are explained using different building types and the structural nature of the main elements to be strengthened linear structures frames plates and shells is explored in detail Case studies included cover a very wide range of historic types and conversions not only monumental masonry structures like neoclassical buildings major temples churches public buildings and museums but also more utilitarian structures like historic mills early reinforced

concrete structures and vaulting types This is essential reading for all students of architectural conservation and practicing architects and engineers who are involved in conservation projects
