B. Monagan,Geddes,Heal,2005 **Computer Algebra Recipes for Mathematical Physics** Richard H. Enns,2006-03-20 Over two hundred novel and innovative computer algebra worksheets or recipes will enable readers in engineering physics and mathematics to easily and rapidly solve and explore most problems they encounter in their mathematical physics studies While the aim of this text is to illustrate applications a brief synopsis of the fundamentals for each topic is presented the topics being organized to correlate with those found in traditional mathematical physics texts The recipes are presented in the form of stories and anecdotes a pedagogical approach that makes a mathematically challenging subject easier and more fun to learn This is a self contained and standalone text using MAPLE that may be used in the classroom for self study as a reference or as a text for an online course Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory Gebhard Böckle,Wolfram Decker,Gunter Malle,2018-03-22 This book presents state of the art research and survey articles that highlight work done within the Priority Program SPP 1489 Algorithmic and Experimental Methods in Algebra Geometry and Number Theory which was established and generously supported by the German Research Foundation DFG from 2010 to 2016 The goal of

the program was to substantially advance algorithmic and experimental methods in the aforementioned disciplines to combine the different methods where necessary and to apply them to central questions in theory and practice Of particular concern was the further development of freely available open source computer algebra systems and their interaction in order to create powerful new computational tools that transcend the boundaries of the individual disciplines involved The book covers a broad range of topics addressing the design and theoretical foundations implementation and the successful application of algebraic algorithms in order to solve mathematical research problems It offers a valuable resource for all researchers from graduate students through established experts who are interested in the computational aspects of algebra geometry and or number theory

Orthogonal Polynomials and Special Functions Erik Koelink,Walter Van Assche,2003-07-03 The set of lectures from the Summer School held in Leuven in 2002 provide an up to date account of recent developments in orthogonal polynomials and special functions in particular for algorithms for computer algebra packages 3nj symbols in representation theory of Lie groups enumeration multivariable special functions and Dunkl operators asymptotics via the Riemann Hilbert method exponential asymptotics and the Stokes phenomenon Thenbsp volume aims at graduate students and post docs working in the field of orthogonal polynomials and special functions and in related fields interacting with orthogonal polynomials such as combinatorics computer algebra asymptotics representation theory harmonic analysis differential equations physics The lectures are self contained requiring onlynbsp a basic knowledge of analysis and algebra and each includes many exercises
